

MANUFACTURING

The Manufacturing department is principally responsible for the production engineering of lightweight & performance vehicle architecture using advanced materials.

Our manufacturing department has a wealth of experience in Body in White high volume manufacture, high volume / low volume vehicle manufacture, along with a huge amount of experience in Automotive production line and robotic cell design.

The primary focus of the Manufacturing department is to ensure that the iStream® technology is developed and fully matured from an engineering and manufacturing perspective to allow Start of Production to commence and go forward unabated.

In addition the Manufacture department proactively contributes to the continual progression of the iStream® process. Our manufacturing team has been selected based on their individual proven track record in automotive production management and also the high level of technical capabilities demonstrated throughout their careers.
