Cardiovascular Research

Cardiovascular diseases (CVD) are the leading cause of morbidity and mortality worldwide. The basis of CVD encompasses damages to the heart and blood vessels that can eventually obstruct blood flow. Diseases under this broad umbrella include coronary artery diseases (e.g. myocardial infarctions or heart attack, angina etc.), arrhythmia, stroke, congenital heart defects and renal/vascular disorders. Multiple risk factors for CVD include age, diet, lifestyle changes, genetic predispositions and family history of hypertension, diabetes and/or obesity. BioVision offers a comprehensive portfolio of products comprising of assay kits, recombinant proteins, antibodies and biochemicals to facilitate research in cardiovascular biology, drug development and biomarker discovery.

Cardiovascular Research Categories

- ▶ Angiogenesis
- ▶ Arrhythmia & Cardiac Arrest
- ▶ Atherosclerosis
- ▶ Cytokines, Growth Factors, Hormones
- ▶ Diabetes and Obesity
- ▶ Hypertension
- ▶ Ischemia Reperfusion Injury
- ▶ Myocardial Infarction
- ▶ Renal Injury/Kidney Disease
