

WHY DNANEXUS

Solve the Challenges of Data Deluge

Making use of the influx of next-generation sequencing data requires overcoming challenges of scale, collaboration, and compliance. Managing do-it-yourself bioinformatics infrastructure is costly, time consuming, and only a band-aid solution.

Harness the Power of NGS

DNAnexus offers an end-to-end genome informatics solution with access to tools and datasets to build and run your analysis workflows. We make it easy to seamlessly stream NGS data from your instruments to the cloud and work securely with global collaborators to solve your genomic challenges faster.

- › Scale NGS without limits
- › Focus on your research and not IT infrastructure management
- › Choose open-source, in-house, or commercial analysis apps
- › Collaborate across hallways or borders
