

Nature's Terrain

Nature's Terrain is a complete, lightweight system for creating custom bases. Easily shape the terrain, place rocks, color with pigments and add landscape. All products are designed to work together for realistic results.

Coming 2020

"After trying these products, I am amazed by what Woodland is doing with their Scenes-n-Nature line. These materials are top-of-the-line. We are going to be able to do so much more with these products. I can't wait to see what else they have to offer and how this will impact taxidermy moving forward!"

Scenes-n-Nature is manufactured by Woodland and provides materials for taxidermists to create realistic displays with ease. Since the 1970's, Woodland has been continually growing and innovating. We now offer more than 2,000 items spanning multiple markets, including model scenery and education. Some of our products are often used in museums. From the beginning, our focus has been to provide high quality products anyone can use to create life-like results. As the world leader in model scenery, we saw the need for a variety of realistic materials in the taxidermy industry.

Nature's Fiber

Create a taxidermy display with superior realism using Nature's Fibers. This complete system is designed to simulate anything from velvet to mosses with specially designed fibers.

Velvet Kits

- Four species of deer
- Two velvet colors per each kit
- Pre-blended fibers for the best results

Static Fiber is a special material that stands upright when it is applied using the Static King™ with our adhesive. This material comes in four pre-blended colors that replicate all phases of vegetation growth. Use Static Fibers to model different plant life in a habitat, such as moss.

The Static King makes it easy to apply Velvet and Static Fibers upright. This applicator has ergonomic design and can be placed upside down for easy filling. Create a varied effect using 2-12 mm lengths of fibers.

Coming Soon
Fall 2019

Elk Velvet applied on an elk antler.

Shaper Sheet® log with applied 4mm Dark Green Static Fiber.
