FOXBOT & FOXHUB

Grow Your Workforce With Bots

YOUR TOP PERFORMER

FoxBot

FoxBots are runtime versions of the Foxtrot software to execute your scripts set up in Foxtrot Enterprise. FoxBots are licensed via a concurrent model the same way as Foxtrot Enterprise licenses and allow you to deploy “automated employees” in an efficient and cost-effective way executing multiple instances of scripts to complete automation projects even more quickly. With minimal training, staff members can activate FoxBots anywhere across the organization to execute the automation of a wide variety of manual processes. Organizations

MANAGE YOUR WORKFORCE

Managing your workforce of FoxBots is a breeze with FoxHub, the central place to orchestrate your automation jobs. View all of your bots and know what they are doing at all times. Put them to work by adding a job for an individual bot, or by adding a team job for multiple bots to complete. Think of FoxBots as a group of people sitting around a table with 10,000 records in the center that need to be processed. Each FoxBot license represents one person at the table capable of handling a record. The more FoxBots an organization has, the faster the records can be processed and they work relentlessly with accuracy. Projects can be executed in a fraction of the time, while also eliminating the bottleneck of operating with a single computer. If a critical error occurs, the operations team can focus on resolving the problem while the other FoxBots continue working.
