Performance Monitoring & Analytics

Security & Backups

Billing

MycloudIT automates critical IT tasks and bundles core management services into one easy-to-use platform.

# Access remote desktops, apps, and data in the public cloud

## What is MyCloudIT?

The MyCloudIT platform automates the delivery, management, and monitoring of desktops, apps, and data in Microsoft Azure.

Any managed service provider, software vendor, or IT professional can migrate any workload over to the Microsoft cloud today, with MyCloudIT.

## How?

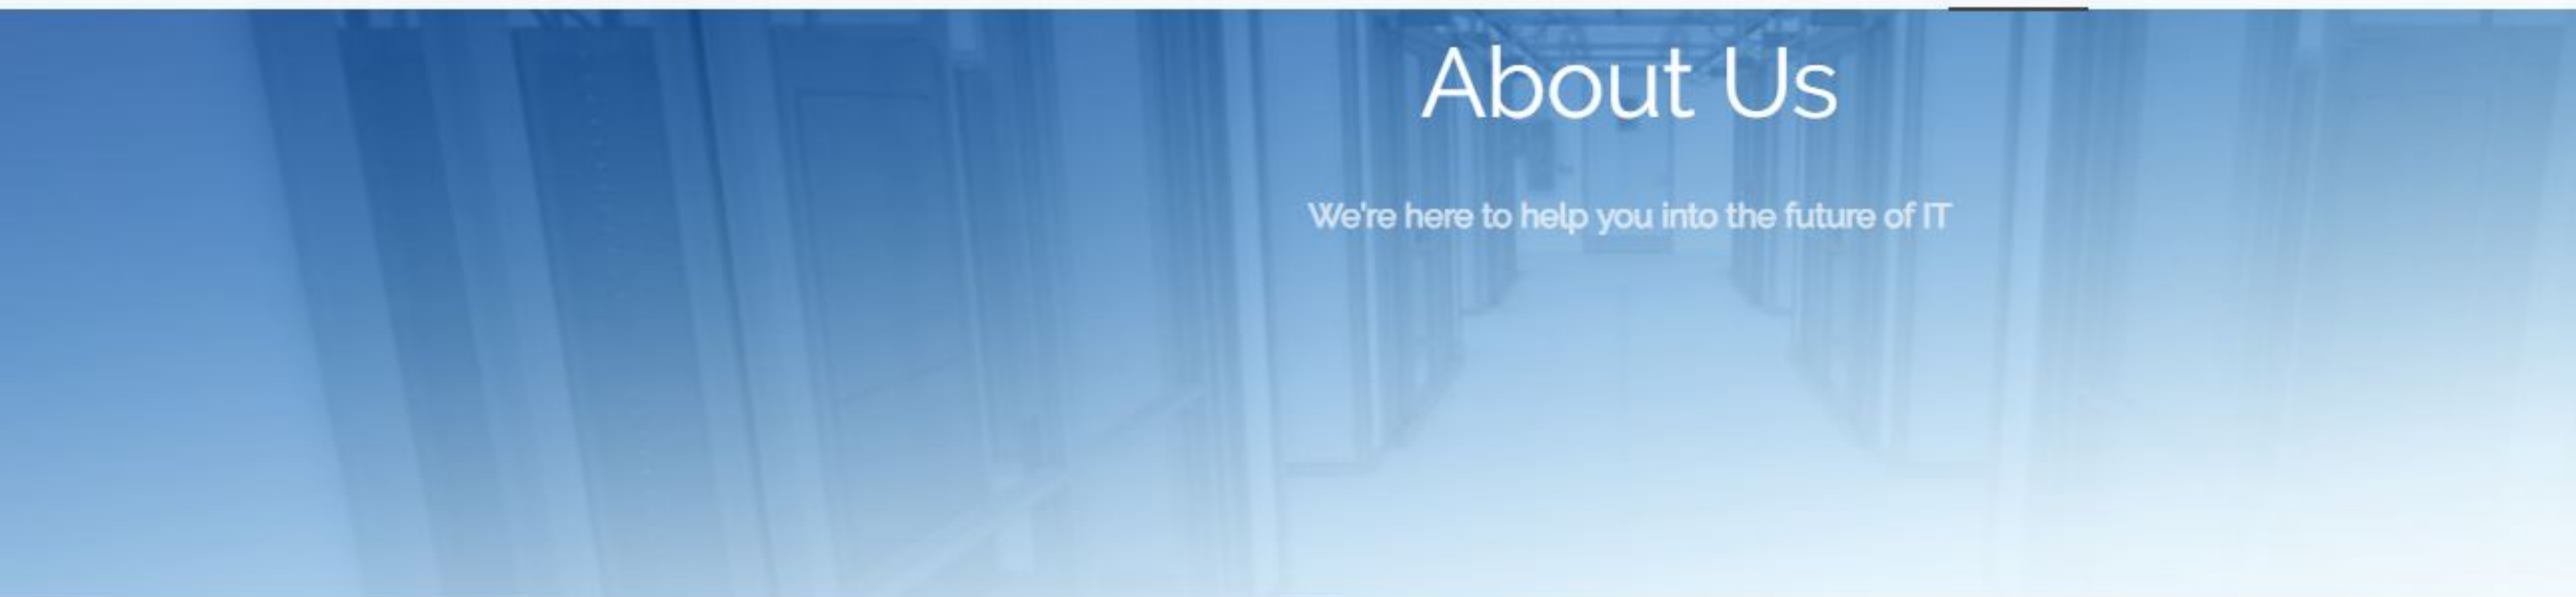

MyCloudIT deploys remote desktop services on top of Microsoft Azure Infrastructure-as-a-Service. We believe this allows for simplified access to the public cloud and more control once there.

At Conexlink, we've built a lot of really cool monitoring and management features to make it easy for you to increase performance and decrease costs. Auto-scaling and auto-scheduler are two key features that simplify management tasks and significantly cut IT costs. All of this is provided in a pay-as-you-go, only for what you use, subscription model.

## MyCloudIT's Story

Our company started because we were frustrated by the cost and complexity of setting up our internal IT network. We realized we could automate the entire process in the cloud saving tons of money and providing flexibility for a mobile workforce. We solved the problem for ourselves and then realized how many other businesses and IT professionals share in that pain, and how leveraging the cloud was the future of IT (no more servers!).

A few days of putting up a Google AdWords campaign, we on-boarded our first customer in Australia. Within in a few hours we had their entire IT network built in the cloud. We've gone on to help many more customers globally, and are happy to say our first customer is still with us.

# About Us

We're here to help you into the future of IT

## Who we are

Conexlink is a Dallas-based SaaS company committed to empowering every business to take advantage of the cost and performance benefits of delivering IT in the cloud.

We create automated solutions for moving businesses into the cloud – the next wave of IT disruption. The end goal is to help businesses become more mobile, efficient, productive and profitable. Our team moves quickly to solve problems, service our customers with respect, and continuously learn and improve based on market feedback.

## Why

At Conexlink, we believe the future of IT is in the cloud, the future of the workforce is mobile, and achievement of each will unlock productivity and innovation for any business.

We created the MyCloudIT platform to simplify and accelerate the process of getting every business there.
