

## Our Services

**Serving as the Owner's representative for all things technology**, Atomic Data will architect, manage, build, integrate, monitor, manage, and support large and medium scale public facing networks. It's true wrap around service designed to let you focus on your game!

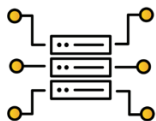

### DAS & Wi-Fi Architecture & Management

We'll get your fans connected by helping you get your DAS off the ground and designing your Wi-Fi infrastructure. Then, monetize your Wi-Fi with a splash page featuring game day sponsors to provide you and your fans with the best game day experience.

### Technology Architecture

From point of sale to security controls to the data center, our expert architects will design a truly enterprise grade infrastructure to satisfy the needs of fans, vendors, operations, and ownership.

### Vendor Collaboration & Management

Identifying the right vendors can be tricky—we'll work with you to understand your requirements and find vendors that fit your needs and your budget. Our Project Management Office then tracks activities, budgeting, and change orders to provide you status updates weekly.

### Build & Implementation

No need to worry about procurement, staging, or any other headache inducing tasks. We'll stage your infrastructure in our facilities, transport on-site, then work with the subcontractors to install.

### Vendor Software Planning & Integration

Maintaining multiple dashboards for a venue's many technology systems is a hassle. We'll integrate systems into one view for all key operations metrics. We'll also make sure your systems integrate to an effective source of shared data—providing consistency across channels.

### Monitoring & Management

Our 24x7x365 Network Operations Center (NOC) watches and triages all aspects of the infrastructure while Network & Systems Engineers manage infrastructure and network devices. Your systems will stay secure and up-to-date—we'll handle everything from connectivity, security and everything inbetween.
