Mobile Testing on Demand

Mobot gets accurate test results on
multiple devices to you
right away.

Welcome to the future of QA testing.

SCHEDULE A DEMO

ABOUT

Mobot is an on-demand mobile app testing service - powered by computer vision and robots - on actual devices.

SCHEDULE A DEMO

Physically test the way it will be used on iOS/Android devices	Test every feature that matters - end to end	Results available the same day	No setup or maintenance required

Mobot's on-demand testing service is simple:

STEP 1

Tell us what to test, or import your test plan.

STEP 2

Grant us access to your staging build.

STEP 3

Our Mobot fleet remotely executes tests.

STEP 4

Receive a detailed report in <24 hours.

"Can't say enough about how much better I feel with each release now that Mobot is part of the pipeline. Our stability rating for iOS is now at 100%!!!"

- Hino Banzon, iOS/Android Software Architect at [Sandboxx](#)

"We have completely integrated Mobot into our CI/CD process and I feel much more comfortable with our automated releases. Mobot has consistently helped us catch issues on edge case devices and has totally replaced our internal device farm."

- Matt Powers, CTO of [AEDIT](#)

INDUSTRIES

Mobot brings automated testing to use cases and industries including...

Mobile and E-Commerce

After every build update, ship to the App Store with confidence that every combination of user profile, payment method and input type in your mobile app can check out and make an in-app purchase.

Internet of Things

Confirm that your app can connect to a Bluetooth/Wifi-enabled hardware accessory after a firmware update.

Medical Devices and Digital Health

Continuously verify and validate every software change to your medical device with little effort, thoroughly documenting each process for your firm's quality management system.

Examples of test cases our customers run...

Validating form inputs

How the app affects device battery life

Composing a message

Changing user settings

SMS/deep links open to the correct screen

How quickly a screen loads

Capturing content in the app using the camera

In-app purchases (credit card, PayPal, etc.)

Switching between WiFi and LTE

Audio output

App interrupted by a
phone call

App performance in
variable network
conditions

Backgrounding the app

User login/
account creation

Bluetooth/WiFi-enabled
hardware accessories

We're hiring! Please send your resume to hiring@teammobot.com
