

Kong Enterprise

The End-to-End Service Control Platform for
Multi-Cloud and Hybrid Organizations

Work Email

Request Demo

OVERVIEW

The Kong Enterprise Service Control Platform brokers an organization's information across all services. Built on top of Kong's battle-tested core, Kong Enterprise enables customers to simplify management of APIs and microservices across hybrid-cloud and multi-cloud deployments. With Kong Enterprise, customers can proactively identify anomalies and threats, automate tasks, and improve visibility across their entire organization. Stop managing your applications and services, and start owning them with the Kong Enterprise Service Control Platform.

CUSTOMER VOICE

"As we evaluated API platforms, it was critical that the vendor we chose could simultaneously support our existing services in the public cloud with what we are building in Kubernetes. Kong offered us the ability to unify services across clouds, which gave us the flexibility to build new services iteratively and how we wanted without fear of cloud lock-in."

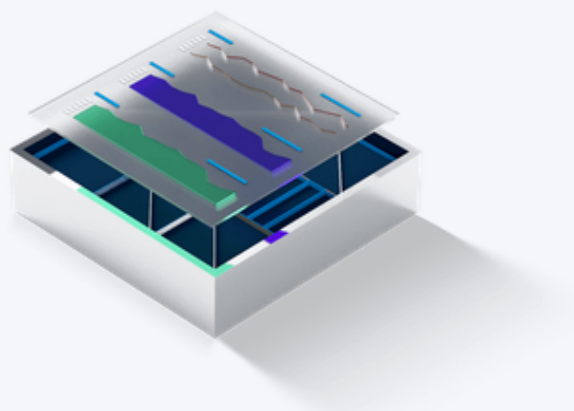

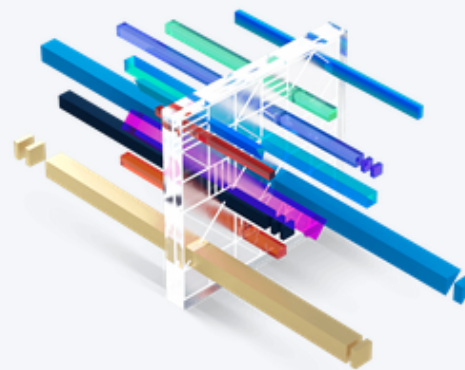

Jason Rodriguez,
VP of Engineering at SoulCycle

BENEFITS

Unparalleled Performance

Kong Enterprise provides the industry's lowest latency and highest scalability to ensure your services always perform at their best. Kong's lightweight, open source core allows you to optimize performance across all your services, no matter where they run.
