

# Kong Manager

Global Visibility with Granular Control

Work Email

Request Demo

## OVERVIEW

As software architectures become more complex, organizations need an easy way to manage their services. Use Kong Manager to organize teams, adjust policies, and monitor performance with just

a few clicks. Group your teams, services, plugins, consumer management, and more exactly how you want them. Create new routes and services, activate or deactivate plugins in seconds. Visualize cluster-wide health within a single pane of glass using intuitive, customizable dashboards.

---

#### CUSTOMER VOICE

"As we evaluated API platforms, it was critical that the vendor we chose could simultaneously support our existing services in the public cloud with what we are building in Kubernetes. Kong offered us the ability to unify services across clouds, which gave us the flexibility to build new services iteratively and how we wanted without fear of cloud lock-in."

Jason Rodriguez,  
VP of Engineering at SoulCycle

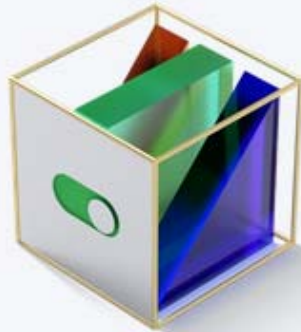

#### BENEFITS

### Dynamic Management

Activate or deactivate plugins to adjust policies for services, routes and consumers instantly. Seamlessly onboard internal and external developers.
