

OPUS | IVS™ Announces Release of DrivePro™ ES Scan Tool Powered by DrewTech

OPUS | IVS™ powered by DrewTech, industry-leader in J2534 pass-thru devices and live support, announces the release of the **DrivePro™ ES** scan tool. **DrivePro™ ES** gives technicians the confidence to repair the most complex vehicles safely and fast with OE-licensed diagnostic software, remote programming, and calibration—all connected to factory-trained, remote experts in real-time.

With **DrivePro™ ES**, you can repair the most complex vehicles fast and get them safely back on the road:

- **IVS 360™** – live support from over 100 OE brand-specific experts who remote directly into vehicle communication systems so they can see the same data you can.
- **OE-licensed Diagnostics** – identifies the root causes of issues for all major US, Asian and European vehicle brands.
- **Built-in Remote Assist Program (RAP®)** – hassle-free, remote-assisted flash programming for complex vehicles.
- **Rugged Automotive-Grade Tablet** integrates the DrewTech J2534 pass-thru device and includes preloaded software that is easy-to-use and more affordable than buying software directly from OEMs – allowing you to maintain profitability.

For more information about DrivePro™ ES contact OPUS | IVS at 877-945-6442 or sales@OpusIVS.com.

About OPUS | IVS™

OPUS | IVS helps independent automotive shops repair complex vehicles safely and fast. Established in 2018, the business has grown through uniting expertise and technology from Drew Technologies, Autologic, Farsight, Bluelink and AutoEnginuity to develop innovative solutions for more than 50,000 repair shops around the world. With locations throughout the US, UK, and Australia, Opus IVS is a part of the world-leading vehicle inspection and intelligent vehicle support company, Opus Group.
