DESCRIPTION

Muck Remover™ Beneficial Bacteria Pellets 5 lbs

- Beneficial Bacteria Pellets
Digests bottom muck from your pond
Treats ponds with water down to 38 degrees
Safe for fish, wildlife & humans
5 lbs treats up to 1/4 acre

How does it work to remove muck?

The strains of natural bacteria and enzymes in Muck Remover are selected specifically for their need to digest organic muck to survive. These bacteria aggressively digest fish waste, animal excrement, leaves and other organic matter. As the beneficial bacteria consume the biological activity in the pond or lake bottom it increases dramatically. As the muck is digested, the potential for hydrogen sulfide (the source of the rotten egg smell) and other harmful gases to accumulate in the pond are reduced. After long term treatment, the pond or lake bottom muck is gradually converted to a fine-grained, more compact soil. Muck Remover can digest up to 6" of organic muck per treatment session when applied to weekly.

What is muck?

Muck is the accumulation of broken down vegetation, fish waste, and other organic matter. Muck contains high levels of nutrients. These nutrients feed weeds and algae. Muck also releases gases into the pond. Years of muck accumulation can eventually fill in a pond.

Why should I treat with Muck Remover?

Muck Remover is designed to consume bottom muck. This is a natural, safe way to remove muck from the pond. Lowering muck levels is one step towards proactive pond management. Mechanical muck removal is costly, treating with Muck Remover pellets are a less expensive alternative.

Muck Removal Application:

Simply broadcast Muck Remover pellets throughout the pond. Apply 2 scoops per 1/4 acre every 2 weeks for best results. For other ponds, dosage can be doubled.

Table with 2 columns: Pond Size (acres) and Scoops (per 1/4 acre every 2 weeks). Rows: 1/4 acre (2 scoops), 1/2 acre (4 scoops), 3/4 acre (6 scoops), 1 acre (8 scoops). Note: Dosage can be doubled for initial treatment. 78 oz scoop included in pack.

Can these pellets be used in a lake around the dock?

One of the most frequent uses of the Muck Remover is to digest muck near docks on lakes. The product is in pellet form so it can be applied directly to the treatment areas.

Is Muck Remover safe for ponds where kids and dogs swim?

Muck Remover is safe for fish, and animals. This is a natural beneficial bacteria and has no water use restrictions.

Will Muck Remover work in a pond without aeration?

Yes, Muck Remover will still work in a pond without aeration. We recommend treating in a well aerated pond because Muck Remover is comprised of oxygen loving bacteria. In an oxygen rich environment, the Muck Remover will yield better results.

Where does the muck go?

Nutrients from the organic muck are released as gas, leaving a soil-like byproduct behind.

Can Muck Remover or Pond Cleanse cause an algae bloom?

No. These treatments do not contain nutrients. These are bacteria and enzymes designed to bind/break down nutrient in water.

What is the shelf life of Muck Remover?

3 years

REVIEWS

Overall Rating 82% of customers that buy this product give it a 4 or 5 star rating.

5 stars March 27, 2020 by jowanna-c. 'I received it and I'll see what it does'

Verified Buyer

5 stars June 11, 2018 by happy L (United States) 'Results after 4 days I spent many hours clearing cattails, but they left about a foot of muck atop a beautiful, sugar sandy lake bottom. I raked about a dozen wheel barrow loads of muck out of the lake and filled it into our garden. I was down to the last few inches with some sandy areas visible 4 days after adding the pellets, the fine muck was nearly gone, what is left is the more woody particles which are easily removed by hand. I'll apply the second dose next week and give an update. So far, very pleased'
