ABOUT CUSCO

About Cusco

Since 1969, Cusco Fabricators, Inc. has been manufacturing mobile vacuum equipment for industrial, commercial and environmental applications. Our products are sold through a vast sales and distribution network, and are actively shipped throughout North America and across the globe.

As a custom manufacturer, our focus is to provide solutions and build equipment to meet all of your business requirements. Our units are designed to pick up and transfer anything from sludge, slurries or mud, to gravel and other solid waste. Whether you require environmental remediation work or transportation of hazardous liquid waste material, Cusco's units will do the job at hand!

We ensure that each of our tanks and pressure vessels are built to the most stringent requirements and specifications. Our quality control program has been approved by ASME, The National Board, US-DOT and Transport Canada as well as the Jurisdiction of Ontario and Authorized Inspection agency in Ontario (TSSA). With these certifications, Cusco is one of few companies certified to manufacture vacuum loading equipment for the transportation of hazardous waste. Cusco's continued commitment to top quality products, leading edge technology, lower service costs and unparalleled customer satisfaction has earned us an impeccable reputation. We have been a proud leader in the liquid waste industry for 40 years and will continue to be your #1 provider in the years to come!
