# Description

## HM130MAX ANNIVERSARY EDITION SAWMILL

Now you can produce beautiful wide live edge slabs for tabletops, counters, benches and more. The HM130MAX features a 30" (76cm) diameter log capacity matched with a 30" (76cm) throat opening allowing for sawyers to produce wider cuts. Get more horsepower with the included 14HP Kohler gas powered electric start engine. A heavy-duty 4 post head design with reinforced back beam supports

Leave a message

heavy-duty 4 post head design with reinforced back beam supports the serious HM130MAX cutting power. All major steel components are powder coated or galvanized steel. The HM130MAX is loaded with new and innovative features like the automatic blade lubricant system that activates when the throttle is engaged and the RapidChange™ blade system makes for quick and tool-less blade changes. HM130MAX is designed to be the most affordable and robust wide cut sawmill in the market.

30" (76cm) Log Diameter

## WIDE PRECISION CUTTING

We've widened the throat to match the maximum log diameter. This is what gives you the ability to slice right through 30" (76cm) logs without squaring the cant. Cut logs 10' 5" (3.1m) long with the standard track configuration or unlock unlimited length potential with optional 6' 5" (1.95m) track extensions. Unbelievable cut accuracy and precision lets you cut veneers as thin as 1/16" (2mm). Cut within 1" (25mm) of the deck ensuring you maximize your usable board foot output.
