RxID Select™ Inventory Management Platform

Drive efficiencies and maintain control of your inventory

As an Acuity GPO member, you have access to a range of financial and operational solutions to help you manage your practice and spend more time with patients. Our proprietary RxID Select™ cloud-based inventory management platform allows you to track and trace medications with ease. Now, you can automate manual processes with a solution designed specifically for retina practices.

RxID Select™ helps you:

- Significantly reduce staff time devoted to inventory tracking and ordering
- Gain visibility into the value of your total inventory
- Establish PAR levels to optimize your inventory spend
- Scan the manufacturer's barcode and track by lot number
- Receive proactive recall alerts for medications distributed by Metro Medical
- Create patient-level dispensing reports
- Secure your sensitive data

A Cardinal Health company

With an intuitive, real-time dashboard view and proactive, customizable notifications, RxID Select™ provides you with greater visibility to help you manage your inventory.

Barcode technology and compliance

Scan the manufacturer's unique, serialized 2D barcode using a handheld barcode scanner or type it in the RxID Select™ platform. Important product information such as manufacturer lot numbers and expiration dates will be loaded automatically so you can track products with ease. Best of all, you can generate barcodes for products that don't come with them.

Patient safety

RxID Select™ is built with patient safety in mind. Alerts are set up to notify you if a patient has received the same or similar medication for either eye within 28 days. RxID Select™ will also send proactive communications for medications distributed by Metro Medical that are recalled or approaching expiration.

EHR integration

RxID Select™ integrates with most EHRs so patient and appointment data populate for you. When you dispense a medication within RxID Select™, it will automatically be recorded in your EHR, saving you time and eliminating the possibility of manual errors.

Inventory categorization and patient-level reporting

Easily manage all your inventory in one place. RxID Select™ provides real-time visibility into sample inventory, specialty pharmacy, patient-assist and site-owned medications. Pre-assign medications and create dispensing reports down to the patient level.

Personalized onboarding and customer service

Our dedicated technology support team will ensure RxID Select™ fits seamlessly with your practice. We'll conduct training with your staff and provide ongoing support to show you how to make the most of the cloud-based inventory management platform.

Gain greater visibility and control of your inventory today.
