Reviews About HairQ Minerals Heavy Metals Results FAQ

PLEASE NOTE: The HairQ test submission kit is now sent out to you digitally. You will NOT be receiving a package in the mail. Your order will be emailed to you shortly after placing it. The test requires a **minimum of a tablespoon, or 125mg of hair**, to be cut to run the test. We cannot accept hair that has been brushed out or shed, it must be cut close to the skin.

A HAIRQ TEST CAN ASSIST YOU:

- find out what minerals are missing in your dog's diet
- detect the levels of harmful heavy metals
- adjust your dog's supplement doses
- prevent disease and cancer
- prevent premature aging
- maintain proper organ and immune system function

MORE DETAILS

Hair is formed from clusters of matrix cells that make up the follicles. During the growth phase the hair is exposed to the internal metabolic environment such as the circulating blood, lymph and extracellular fluids.

As the hair continues to grow and reaches the surface of the skin, its outer layers harden, locking in the metabolic products accumulated during this period of hair formation. This biological process provides us with a blueprint and lasting record of nutritional metabolic activity that has occurred during this time.

Determining the levels of the elements in the hair is a highly sophisticated analytical technique. When performed to exacting standards and interpreted correctly, it may be used as a screening aid for mineral deficiencies, excesses and/or biochemical imbalances.

A HairQ test provides you with a sensitive indicator of the long-term effects of diet and toxic metal exposure.
