About PerfX

PerfX was established in 2014 in Minot, North Dakota. Despite starting at the beginning of the downturn in the oil markets, PerfX was able to build and grow a successful cased hole wireline service, specializing in pumpdown perforating operations

Pumpdown Perforating

PerfX specializes in pumpdown perforating and completed over 11,000 stages in 2017

Our Goal

Exclusively focused on wireline perforating services, we aim to improve horizontal well completions through faster, safe, and more efficient wireline operations.

Our Mission

Our mission is to continuously improve cased hole perforating operations and efficiencies through the implementation of industry leading processes and technology.

We create value for our customers by employing and retaining a motivated, dedicated, and experienced workforce who are invested in the future of the company. Our technology leadership, low employee turnover, aligned incentives, and culture of excellence deliver industry leading results.

Pumpdown Perforating Experts

PerfX Wireline Services is a privately owned and operated wireline company located in North Dakota and Texas. Our primary focus is pumpdown perforating with the goal of improving horizontal well completions through faster, safer, and more efficient wireline operations. Combining the most experienced and capable crews with the highest quality equipment is the first step in maintaining PerfX's high standards service quality.

INTRODUCING THE

MODULAR GUN SYSTEM

Our goal was to design and build a gun system that improves efficiency at a neutral cost to our clients. The XConnect gun system has not only met this goal but exceeded it.

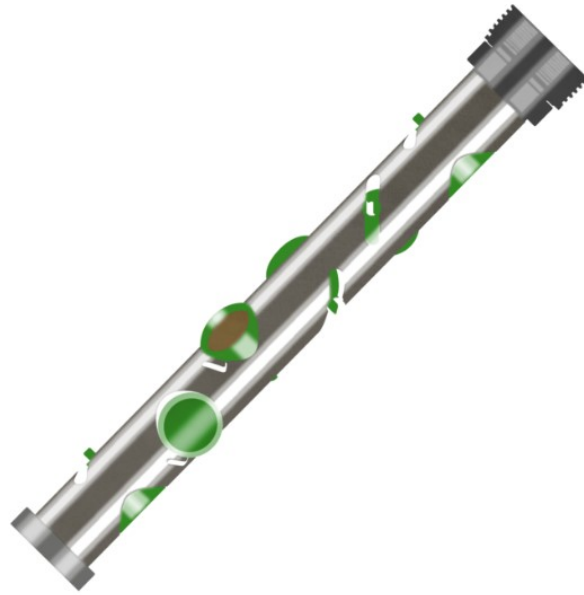

- ✓ Portless Gun System
- ✓ Eliminates wiring onsite
- ✓ Reduces Human Error
- ✓ Most Cost Competitive on the Market
- ✓ Minimize Injury Risk with new Tooling - No Pipe Wrenches

EFFICIENCIES

The XConnect gun system is designed around standard 3 1/8" gun components currently available on the market. This gives our clients the flexibility to choose the perforating charge that you would like to run from various vendors such as Titan, Owens, Geo-Dynamics, Dyna-Energetics, etc. XConnect also gives our clients the flexibility to run the gun lengths, shot densities and phasing that are available on the market. Most commercial "Plug and Play" gun systems require you to run their complete system without substitution which limits your choices and flexibility. XConnect also has the advantage of being able to substitute various components from another vendor if a problem arises.

Pumpdown Perforating

PerfX is an industry leading provider of high pressure pump down perforating services. PerfX personnel are highly trained and experienced operators committed to providing industry leading wellsite safety and service quality.

XConnect Modular Gun System

- PerfX's New Patented Modular Gun System
- Significantly reduces gun string length
- No Port Plugs
- Reduces mis-runs through elimination of gun wiring
- Price competitive with conventional gun strings
