

Star Drive for easy slip-free driving

Top quality alloy steel

Premium coating to resist the effects of salt, acids & wood treatment

Engineered to break thru the toughest wood for professional and home use

SABERDRIVE PLATINUM
Construction Lag & Timber Screw

Construction Lag & Timber Screw Smarts

Do's	Don'ts
Do use for wood to wood applications that call for lag screws up to 3/8" diameter	Don't use instead of lag screws larger than 3/8" diameter
Do use a high torque, 1/2" variable speed drill	Don't use to fasten joist hangers to beams - use hanger nails
Do choose the proper length; the screw should be fully imbedded into both joined pieces	Don't use for below-grade applications; use stainless steel
Do use the stainless steel fasteners in redwood or cedar	

*Plated and coated fasteners are rust resistant, not rust proof. Contrary to some claims, all plated and coated fasteners will eventually corrode when used in corrosive environments, including some types of treated wood. Use stainless steel where maximum corrosion resistance is required.

CAUTION: Wear safety glasses. Do not put screws in mouth.
PRECAUCION: Use lentes de seguridad. No ponga los tornillos en la boca.

Choose the Right Fastener
