Description

CAIML Consulting Made Simple

Start building a rock-solid CAIML deployment strategy with this initial consultation.

Fourth Industrial Systems consulting provides the expertise and guidance you need to help map out a straightforward CAIML cloud-based strategy that prioritizes your individual needs and long-term goals while addressing the challenges of cloud such as financial reporting and workload rationalization.

We partner with industry-leading data scientists & cloud computing vendors and offer recommendations that work with your Enterprise IT requirements and budget. Request a consultation to get started on your custom CAIML strategy.

How it Works

1) Preplanning Discussion

During your initial consultation, a CAIML Executive (CE) will learn more about your organization's needs and goals and answer any questions about cloud consulting services.

2) Proposal Recommendation

Based on your individual goals and requirements, your CE will recommend one of our offerings, such as a micro-consulting engagement or a prepackaged plan, and deliver a Scope of Engagement or Statement of Work.

3) Engagement Preparation

During your initial consultation, a CAIML Executive (CE) will learn more about your organization's needs and goals and answer any questions about Artificial Intelligence, Machine Learning, and cloud consulting services.

4) Execution of Service and Summary

After your cloud planning engagement, you'll receive a summary of the findings and custom recommendations for a cloud adoption strategy.
