## Solution highlights

### Maximize Sales and Availability

Avolin's Vision Inventory Management solution helps you create optimal product ranges based on demographic and sales history. Maximize in stock availability without overstocking any retail store. Vision helps you capture all possible sales opportunities and meet unexpected peaks in demand.

### Minimize Costly Returns

Vision can help you optimize usage of your available stock so you are only sending into store products that you know will sell. A more accurate stocking model ensures retailers and suppliers avoid costly markdowns or returns of unsold products to the distribution center. Vision helps you optimize your overall inventory position in your retail supply chain.

### Advanced Analytics and Insights

Vision Inventory Management is full of class-leading analytics and reporting functionality. A wide range of pre-built reports are available to run on an ad-hoc basis or can be routinely sent to your inbox so all the insight you need is ready when you are.
