Password vault that safely encrypts and stores a user's passwords on a singular mobile device. Uses 2048-bit RSA Encryption to ensure no other person or application can access and read your private password information. PIV Password also provides proprietary algorithms

for creating random passwords.

For users who have upgraded to our Premium plan, they have the ability to share passwords with other peers (Peer Links) and backup their encrypted data in our cloud. For these users, PIV Password provides a patent-pending recovery and identity verification software solution (Proximity) to allow these users to recover their encrypted password data from our cloud. This new
