Version 4.5:
The Weather
Release

[Download the Pilot's Guide](#)

New version 4.5 with [all-new '4D Predictive Weather'](#) including a Timeline, Altitude Slider, 17 Weather Layers, New ADS-B and Internet Weather Products!

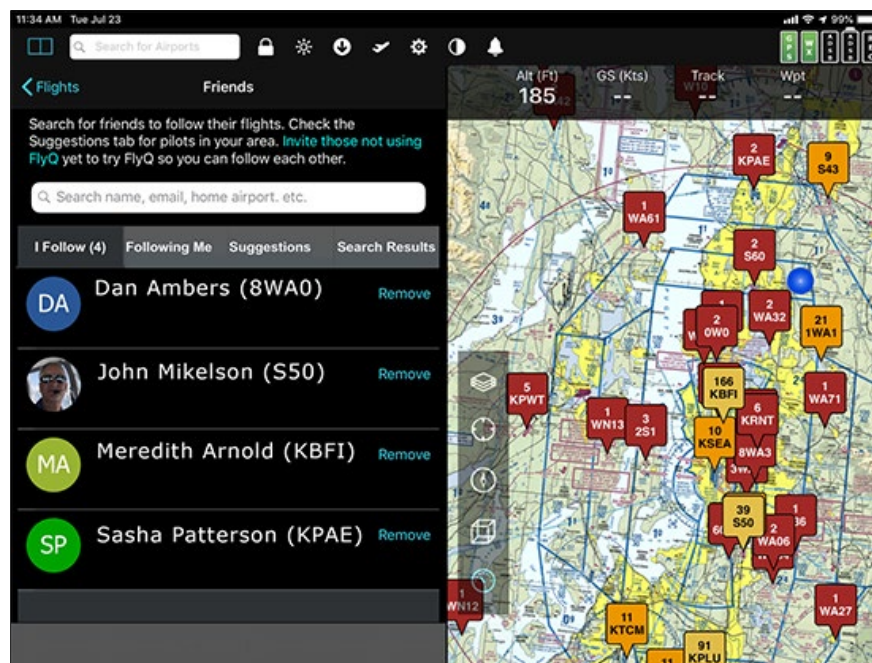

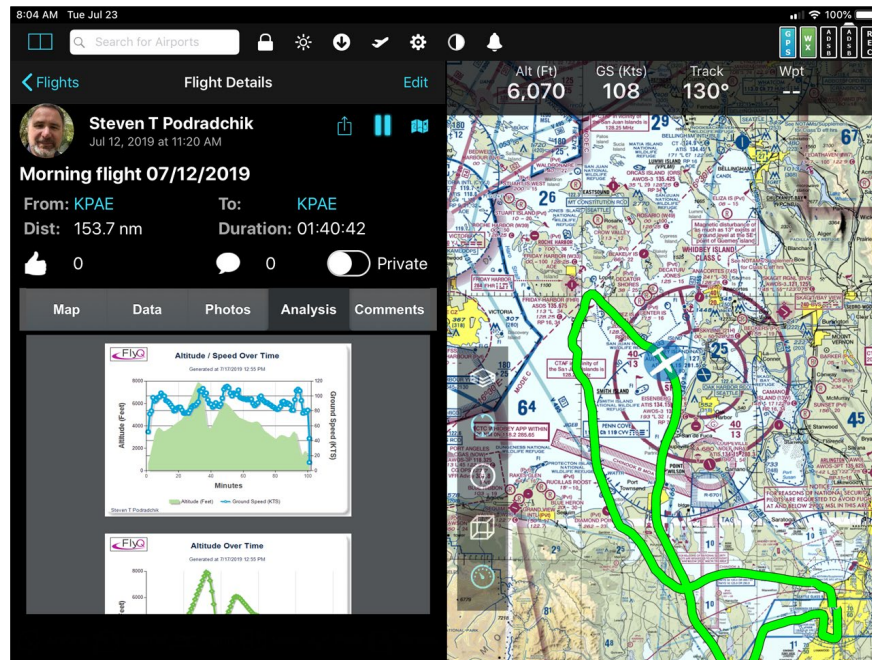

FlyQ EFB, for the **iPad and iPhone**, is the #1 rated aviation app because it makes your flying easier and safer by thoughtfully integrating powerful features in a way that minimizes the number of screen taps and increases readability (e.g. larger fonts for older eyes). **The exclusive Augmented Reality (AR) feature adds a new dimension to situational awareness.** Pilots also love that it [supports more than 20 different ADS-B systems](#), connects to [Avidyne and Dynon in-panel systems](#), and is reasonably priced with annual subscriptions for just \$79 (VFR) or \$159 (IFR + VFR). [What's included at each subscription level?](#)

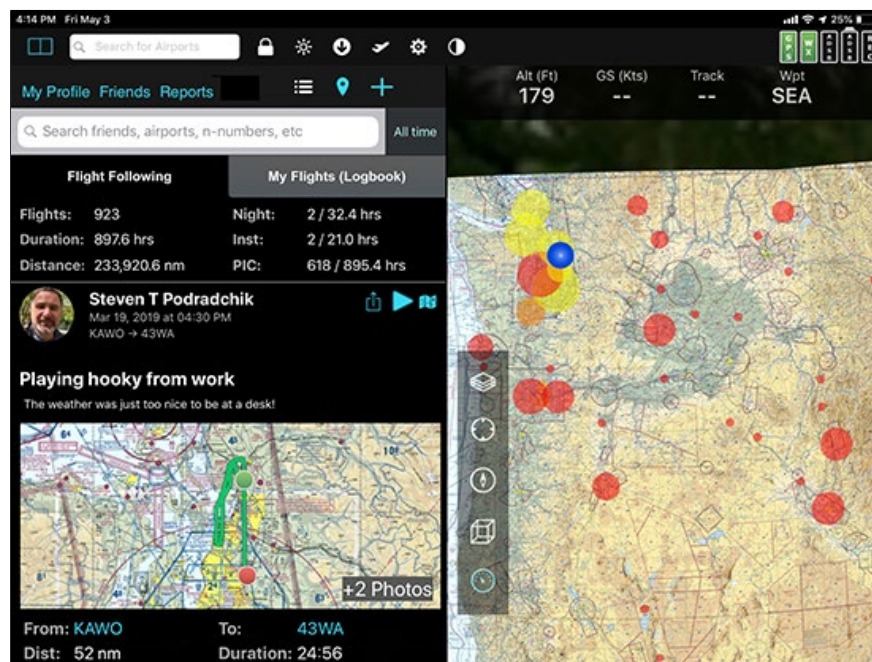

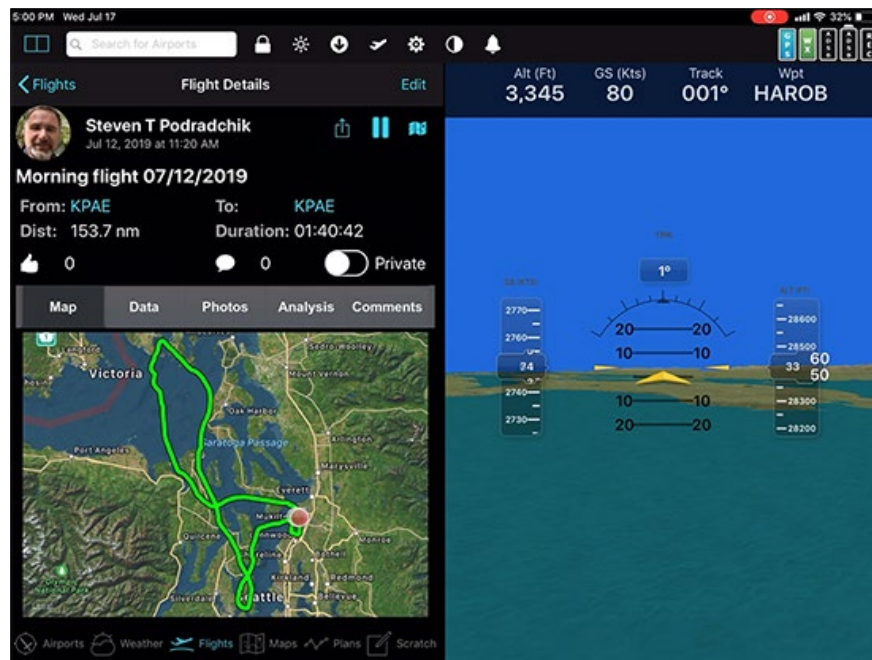

Our exclusive **Rule of 2** means no more than 2 taps to get to information while flying. Fly the plane, not the iPad.

Other key features (**new ones in bold**) include Split screen, [Visual Logbook](#), [Visual Playback and Graphical Analysis](#), [looks for and uses recently cleared ATC routes for IFR flights](#), [ADS-B tail numbers with exclusive Buddy List](#), Slingshot wireless ChartData transfer to in-panel avionics, 3D synthetic vision, flight recorder / playback / export, plates on the map, automatic fuel stop planning based on lowest prices, [CFI features](#), 4,600+ Seattle Avionics airport diagrams, flight tracks, rich Documents support, procedures/diagram annotation, **VFR Flyways**, [Patent-pending Floq Network](#), helicopter and Gulf of Mexico overlays, extended runways, distance measurement systems, fuel prices, full Leidos support, CAP grids and search patterns, wind-optimized flight planning, and plates and diagrams for Mexico and Central America.

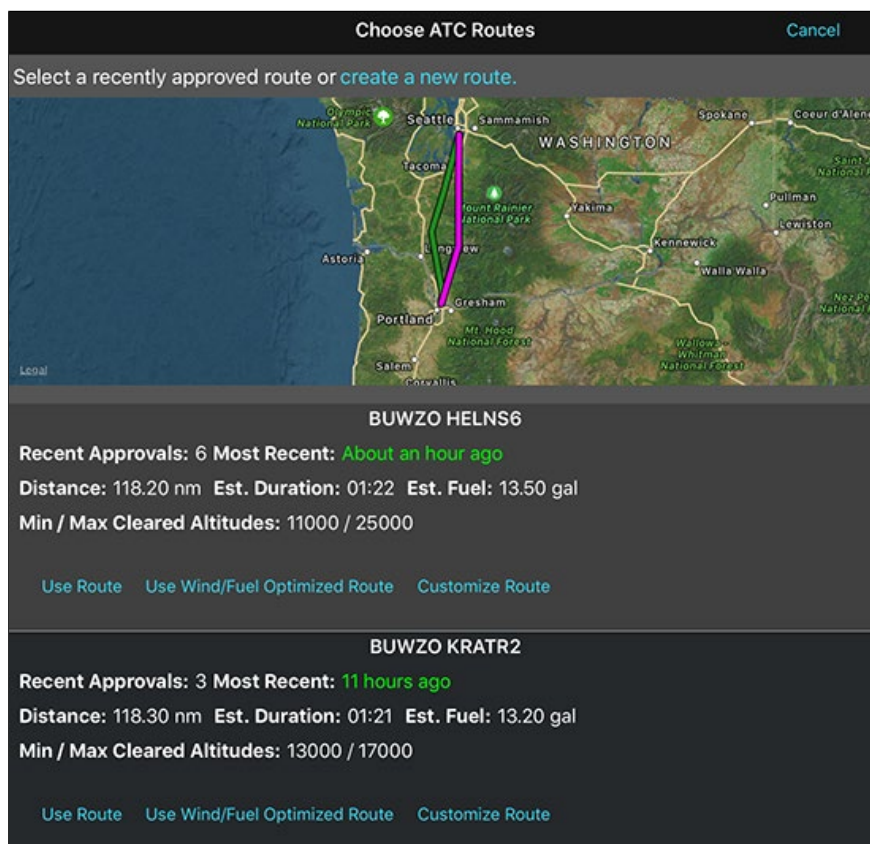

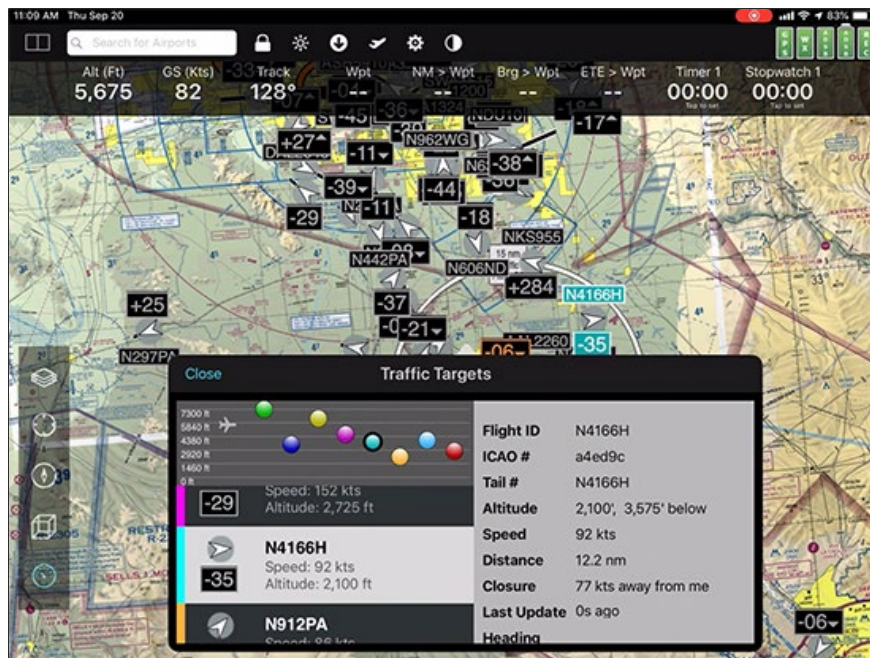

If you're still using another app, perhaps it's time to ask yourself why. Download a free trial of FlyQ EFB and make your own decision.

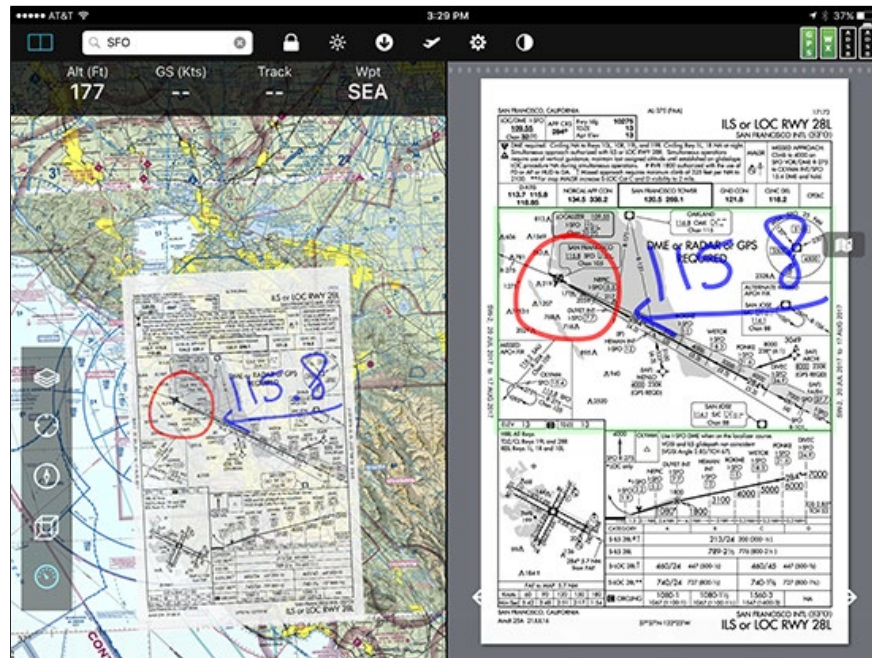

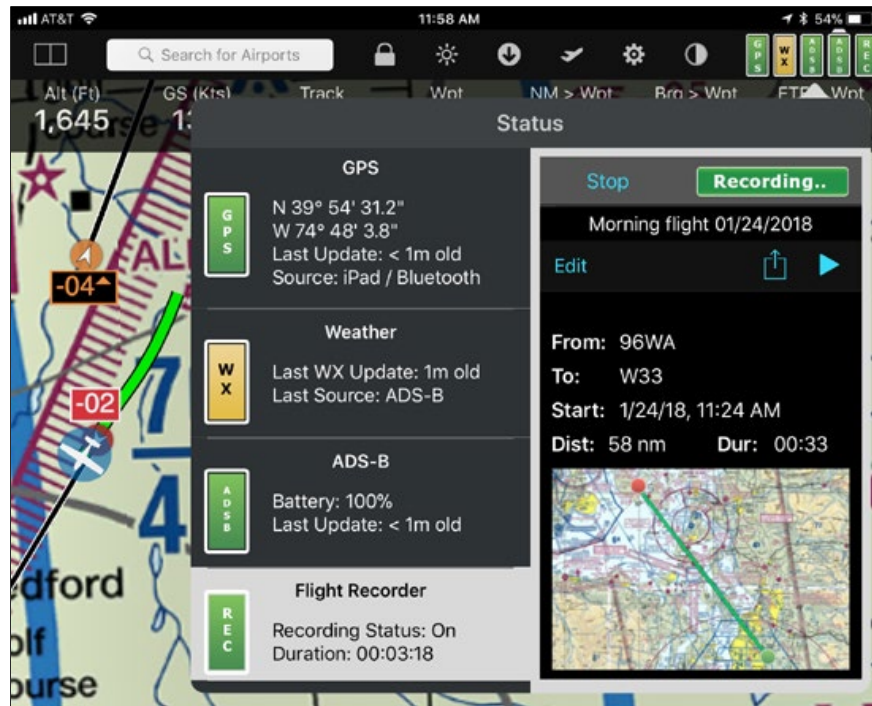

Requires at least an iPad (2017), iPad Air, iPad Mini 2, iPad Pro, or iPhone 5S. iPad Air 2 / iPhone 7 or later recommended.
