

Technology to Support & Engage

The Epiphany Platform provides a new method of engaging students: integrating intuitive and captivating digital tools with cloud-sharing and real-time feedback.

Epiphany helps instructors understand not just what students know, but how and when they know it.

Learning Tools

Our tools give students a space to experiment with ideas and apply concepts - encouraging critical thinking and problem solving. We blend commercial game design with the mobile and digital technologies that students have grown up with to provide a unique and refreshing learning experience.
