Project Management

GMI's Project management staff focuses on safety, quality, and production. Our Project Managers continually coordinate our scope of work with other subcontractor's work at the jobsite while effectively communicating the plan and process to our clients. Our management staff strives to be known as team oriented and easy to work with. We believe that open lines of communication create harmonious project and work environments, which in turn creates a successful project!

In addition to the service listed on our website [Services](#) tab, GMI maintains local office presence in DFW, Austin and Houston with Project Managers and Estimators to meet the needs of each area. We also have a prefabrication facility located in Justin, TX, to handle prefabrication, particularly helpful with load bearing metal framing projects.
