Cutter Cartridge®

By [fmidev1](#) | February 28, 2019

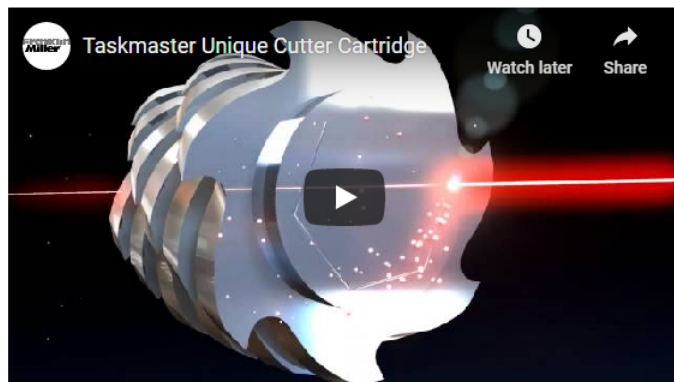

Cutter Cartridge® technology is a unique design used in TASKMASTER® TM8500 and TASKMASTER TITAN (TM14000) grinders. With the Cutter Cartridge technology, TASKMASTER grinders have major advantages including ease of maintenance, fewer parts and increased unit strength.

This design takes 6 individual cutters and spacers (a total of 12 pieces) and combines them into one unit. With 1/12 of the moving parts, the design is much more efficient.

It is also easy to install and there is no longer any need for stack re-tightening.

Every *cartridge* length is uniformly machined and precisely ground to assure accurate cutter lineup. For more information on *Cutter Cartridge* technology use the [contact page](#).
