

VENTILATORS INSTEAD OF AV++™

HOW TO – COVID-19 MASKS

Welcome to our home page. You should find all the information you need about Mad's award winning exhibits and 21st Century technology right here.

Mad Systems is an award-winning AudioVisual and Interactive System designer and integrator. We specialize in exhibits and interactives for museums, visitor centers, brands, digital signage and theme parks. We are a nationally certified Women's Business Enterprise founded in 1998.

Mad Systems will use any technology required to create AV systems, but we have produced several next generation ground breaking technologies, including the QuickSilver® Audio-Visual eco-

system, the first low-cost complete 21st Century AV system requiring minimal infra-structure that fully integrates AV and IT.

QuickSilver® can provide a wired or a wireless solution, allowing for huge reductions in hidden costs of AV systems. It provides for a new and very affordable way of creating AV systems and allows for cost-effective personalization of media delivery, and easy ways to exceed any ADA requirements while removing previous limitations to designers.

Breaking News:

Mad Systems has released a host of new ***touchless technologies*** for a post-peak COVID-19 world. As various institutions are about to re-open, and as we continue to design new systems for future installations, Mad now has created a range of equipment as part of its QuickSilver® range to help with that process.

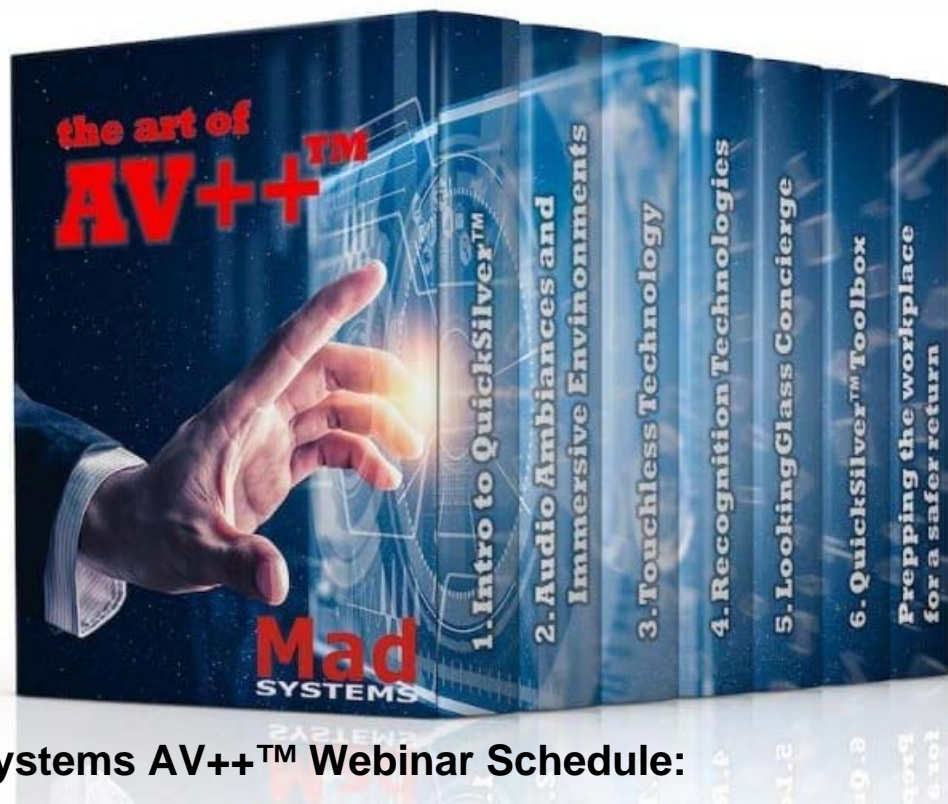

[More detail on our Touchless Technologies.](#)

From touchless 'TouchScreens' to conversion of standard monitors for interactive use, this creates an option for visitors who prefer not to touch the screen. New options include touchless buttons and other controllers. This new technology will allow for visitors to have a full interactive experience while remaining safe.

~~Webinars on AV++™~~

Mad has re-written the book on AV systems, as evidenced by this series of webinars that present the latest nextgen AV++™ technology. Find our existing webinars, or register for our upcoming AV++™ webinars through our blog posts or through the links below to find out more about our existing and latest technologies to deal with a 21st Century audience and includes viable options to deal with a post-peak COVID-19 world.

Mad Systems AV++™ Webinar Schedule:

- 4/28/2020 Intro to QuickSilver® (Listen to recording)
- 5/05/2020 Audio Ambiances and Immersive Environments (Listen to recording)
- 5/12/2020 Touchless Technology (Listen to recording)
- 5/19/2020 Recognition Technologies (Listen to recording)
- 5/26/2020 LookingGlass Concierge (Listen to recording)
- 6/23/2020 QuickSilver® Toolbox (Listen to recording)
- 6/09/2020 Bonus Webinar: How to Prep your Workplace for a Safer Return (Listen to recording)

With QuickSilver®, AV and IT have converged. It comprises non-proprietary hardware only, which results in lower cost,

longer life systems with a much longer, much more affordable supported lifespan which in turn reduces operational costs. This helps our clients with the initial purchase and installation budget, and also with their long term budgets. The full integration of AV and IT has changed the equation.

**AV + IT =
AV++TM**

Mad specializes in AV++TM: the custom design and engineering of these advanced systems.

QuickSilver®, the first AV++TM solution in the world, is now available from Mad Systems as a proven system. Call us to talk about Mad's AV++TM solution. Of course we're nowhere near finished with our development work. Even bigger changes are afoot as part of our AV++TM overall system approach!

With full convergence of AV and IT a done deal, what remains is to find new opportunities and

solutions.

The recent announcement of the DrinkMe AV Design and Configuration software provides automation for both the AV design process and system configuration.

This new development will change the way AV is done - a lot of the design and pre-configuration work involved in producing AV systems is automated, saving even more time and money.

QSEQ™, which stands for QuickSilver® Equalizer, is a revolutionary process that allows the company to partner with other AV providers, fabricators and others to create lower cost AV solutions to end clients.

Mad launched patent pending facial, color / pattern and license plate recognition systems for personalized media delivery and the patented LookingGlass Concierge system designed to improve customer service options in all kinds of different applications.

You will find more information on all of these new and exciting technologies below. We have changed 'AV Systems' to a new world of "AV++™ systems", the result of full convergence of AV and IT.

We **design, engineer and develop** reliable turnkey systems and specialize in innovative and unique solutions from high tech state-of-the-art exhibits to electro-mechanical hands on experiences. We provide a full range of solutions to the many challenges of audiovisual presentations including everything from interactive computer systems to video display solutions that address the needs of our clients anywhere in the world.
