Empowering People With Disabilities

What is Tech2Work™?

In a unique partnership, the Learning Academy Services at the University of South Florida and MacDonald Training Center offer best practices for teaching technology skills for neurodiverse students leading to certifications in IC3 Digital Literacy and Automation Anywhere. Our team of experts support businesses to create a diverse workforce with employees who possess the skills that directly impact productivity.

How Can We Help Your Company?

What makes Tech2Work™ different from other initiatives is that we *customize* a plan for each company that is developed from a three step process.

1. We assess your work culture and environment to determine what works and does not work for neurodiverse employees.

2. We listen to your needs and desired outcomes and help source the right people that match your job requirements.

3. We provide a set of recommendations that will lead to meeting your goals. We achieve positive outcomes through providing training, technical assistance, job coaching and developing a sustainable program.

Did You Know…

Many Fortune 500 companies around the world have found the benefits of hiring a neurodiverse workforce? Through several work initiatives that have gained popularity, individuals with autism spectrum disorder and other disabilities have been found to offer unique perspectives and skill sets that have yielded unexpected positive outcomes at every level in these companies.
