

# Move to the Cloud

IT Modernization, without the headaches

## Increase IT efficiency

As cloud applications replace and augment on-prem applications, IT is tasked with deploying and managing access for an ever expanding, increasingly complex ecosystem.

## Improve workforce productivity

The number of apps deployed by enterprises has increased 68% over four years\*, creating distractions for employees as they scramble to navigate access and remember credentials.

## Deliver secure, always-on access

60% of organizations modernizing IT aim to support work from "anywhere" environments, introducing new risks and reducing the effectiveness of traditional security practices.\*\*
