# Palletizers and packaging automation systems custom designed for your unique requirements.

Let's keep things simple. Downtime is not an option. You need packaging automation that will maximize throughput no matter what comes down the line. Tough environments challenge automation equipment, PASCO is tougher - guaranteed.

RECENT INSTALLATIONS

### AUTOMOTIVE / COMMERCIAL BATTERY STACK-OFF

The nation's largest manufacturer of batteries required a new system capable of outpacing their two main production lines with each line running at a rate of more than 24 batteries per minute. There would be more than 90 different battery sizes and styles, all fully charged. A thick honeycomb sheet would be required between layers,.....

### HIGH SPEED, LOW TEMPERATURE OPERATION

A food processor approached us to engineer a palletizing solution that would keep pace with high-volume chicken production in a low-temperature environment. Prepared inside of a cold room, the case-packed product is turned, picked with a vacuum-type tool, and palletized with freezer sheets between each layer. The speed of the palletizing system had to match.....

### FULL LAYER DE-PALLETIZING OF RAINBOW PALLETS

A national, big box home and garden retailer required a very high volume depalletizing system for a new, 1.5 million square foot warehousing and distribution facility. The challenge was to design and build a de-palletizing system capable of keeping pace with the influx of shipments, accounting for nearly 20,000 SKUs, from 60 dock doors running.....
