**Arc Synopsis™**

Recognize critical points in EEG with Arc Synopsis Trends and Seizure Detection

Arc Synopsis Trends and Seizure Detection help you recognize critical points in EEG that help assess cerebral function, predict outcomes, and make informed treatment decisions, including:

- Seizures
- Cerebral function background patterns
- Sleep/wake cycling
- Burst rate

Trends Package

Use Seizure View to see seizure-marked EEG data by quickly truncating the file, or filter out seizure-marked data and view all unmarked EEG data.

Add a Trends Window and customize analysis without any impact on automated event detection.

Seizure Detection Package

In addition to all of the features of Trends Package, the Seizure Detection Window lets you set thresholds for seizure and event activity, and then automatically detects the events and marks the data.

Arc EEG

How much does an EEG machine cost?
