**\$389.00**

### RAD 22

The new RAD 22 suppressor builds on OSS's advanced Flow-Through™ technology to deliver unmatched performance to rimfire shooters. The RAD 22 uses their latest innovation – the Flow Baffle™ – a unique design that incorporates radial grooves that direct expanding gases away from the bore-line, routing them forward through the suppressor and away from the shooter. This means the RAD 22 runs quiet and much cleaner than other rimfire suppressors, and it's easy to disassemble and reassemble without special tools or indexing.

### Materials:

The RAD 22 is made with titanium and 17-4 heat-treated stainless steel, has a lifetime warranty, and uses a ½ x 28 thread pitch to connect directly to the host firearm.
