## Welcome

Welcome to the home of the Pressbooks Open Source project.

Pressbooks is a book content management system that exports in multiple formats: ebooks, webbooks, print-ready PDF, and various XML flavours. The system is built on top of [WordPress Multisite](#), and makes significant changes to the admin interface, web presentation layer and export routines of a vanilla WordPress install.

Pressbooks is used by educational institutions, academic presses, small publishers, as well as individual authors. There are three ways to use it:

- Let us host and maintain a Pressbooks network for you ([PressbooksEDU plans](#) include priority setup, tech support and training, and save your IT/development team countless hours)
- [Host and maintain](#) your own Pressbooks network (best for institutions with development staff devoted to maintaining your system)
- Use [Pressbooks.com](#) (ideal for individuals or as a test bed for institutional use)

On this site we provide resources and links for the open source community. [Get involved!](#)

Pressbooks is free software, released under the [GPL v3.0](#) license.

**Pressbooks, Proudly powered by WordPress.**
