Complete Enterprise Security

wire

Secure by Design

Wire's open-source platform is built with a security-first infrastructure that incorporates zero-trust protocols and always-on end-to-end encryption.

Cyber Security Excellence Award 2020

Feature Rich

Seamlessly message, create groups, send and search files, start an audio or video conference call, set up guest rooms, and much more. Wire keeps employees connected at all times and from anywhere, even with low bandwidth.

RSA's 'Best Messenger' 2020

Capterra's Top 20 file-sharing software 2020

User Friendly

Wrapped in a clean and intuitive design that our users love, Wire is as easy to use as consumer applications, and available on iOS, Android, Windows, Mac, and Web App.

Capterra's 'Best Ease of Use' Award 2019

Built for Mobility

Empower today's mobile workforce with a secure solution that is fit for modern communication – whether in the office or on the go. Gain both mobility and security without suffering from man-in-the-middle vulnerability.
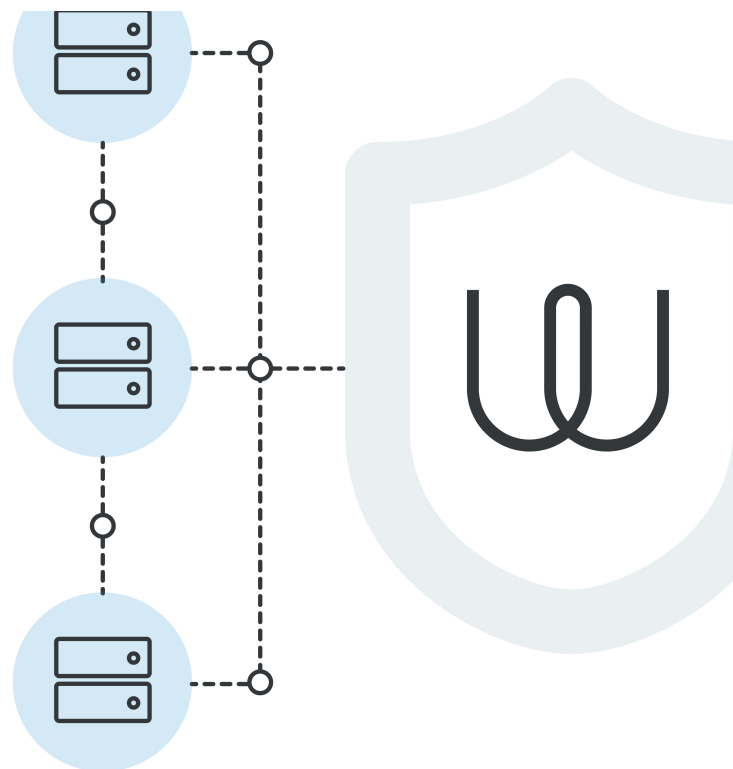

Fit for Your Organization

Built to serve large and complex organizations, Wire Enterprise offers single sign-on, integrations, custom deployment options, as well as a dedicated customer success manager, and Service-Level-Agreement.

Wire™

Enterprise Communication

Wire is leading the development of a new, open global standard for secure communication technologies called Message Layer Security (MLS).

Partnering with other industry leaders, our goal is to enable users to operate between different messaging platforms with the same level of privacy and security that already exists in Wire.

→ Learn more about our work on MLS

Wire is Ready for the Future of Work

With systems becoming more interconnected, workforce habits decentralizing, and cyberthreats on the rise – a solution that meets new security challenges is needed.
