

Feeding Program

Deer have varying nutritional needs throughout the year. The Antler King® Program is designed to meet these needs in the most economical way. Bucks and does have a high demand for protein, minerals, and vitamins from February through August, for antler growth and milk production. From September through January, both bucks and does have a...

Why do deer need minerals?

Providing your deer herd the proper vitamins, minerals and nutrients on a year-round basis can not only produce larger antlers but it can have a positive impact on your whole deer family. The right minerals in the right proportion are important for increasing body weight, antler size, milk production, immune system health and disease prevention....

Why plant food plots?

Planting food plots is the single most effective way to attract, grow and keep deer on your property on a year-round basis, if you have the food you'll have the deer. We completed a 5-year radio-collar study on deer and food plots and found some astonishing results. We found that deer that have relied upon...

What kind of minerals do they need?

There are many different types of minerals, vitamins, and nutrients that deer need to survive, remain healthy and maximize their genetic potential and it is important to find a well-rounded mineral to provide all of these for them. While a growing antler is comprised mostly of protein (see food plot and feeding program for protein...

What to plant?

When planting food plots, there is a lot to consider and one crucial component is planting food sources for Spring, Summer, Fall and Winter. Although you may only hunt in the Fall, your deer herd needs to eat year-round and there are certain food sources they will desire and need, depending on the time of...

How do I plant food plots?

A nice mix of Spring and Summer protein sources and Fall and Winter energy sources will provide deer the nutrition they need to survive and thrive and will keep more deer on your property on a year-round basis. If you provide food, water and cover your deer will not have to leave your property. If...

"I'll never forget the first time I hunted a 1 acre Slam Dunk Plot. I took my father in law with, who had never bow hunted before, we saw 22 deer that night come into the plot... It was simply amazing and he was hooked. I have sold and tried other food plot seeds but Antler King Products have blown the others away. We have had many satisfied clients."

BIGGER BUCKS - HEALTHIER DEER

Planting food plots is the single most effective way to attract, grow and keep deer on your property on a year-round basis, if you have the food you'll have the deer. We completed a 5-year radio-collar study on deer and food plots and found some astonishing results. We found that deer that have relied upon year-round food source (food plots) spent 95% of their time within 1/2 mile of that food source and most of that time was actually spent within 1/4 mile, thus proving the effectiveness and importance of planting food plots. This also means that whether you hunt on 40 acres or 4,000 if you can offer a year-round, relied upon food source, you'll hold more deer on your property. We recommend planting 5-10% of your property in food plots, as studies show that is the amount of food it will take to sustain your deer herd for an entire year, with average deer densities. If you have 40 acres...then roughly two-four acres should be planted...if you have 100 acres then 5-10 acres should be planted and so on. Now we realize, not everyone has the equipment or ability to plant that much food, so ANY food is better than no food. If all you can plant is a 1/4 of an acre in front of a tree stand, then absolutely plant it... your deer will thank you for it. You might consider planting a Spring food source in that plot (Red Zone, Trophy Clover, No Sweat) and then re-planting it in the late Summer with a Fall/Winter food source (Honey Hole, Slam Dunk or Lights Out) to keep your deer coming back all year long.

To help you establish the most successful food plot program available we've created an easy to follow "7 Easy Steps to Planting Food Plots", DVD, Video and Brochure that can be found on our website. You can check out the 15 minute video and brochure by following this link: [Food Plots in 7 Easy Steps](#)
