 Applications open in November.
 Providing the best experience for all bus and driven students.

Apply to be an iResearch Institute mentor

A few words from our founder

I founded the iResearch Corporation with the goal of making research accessible to all. While our roots were in biology, we have since expanded our team of experts to include fields ranging from astronomy to machine learning, and from genetics to environmental science. Our hope is that any student, anywhere in the world, is given the opportunity to make a difference, discovering something new within both themselves and the world.

- Dr. Serena McCalla, Founder of iResearch Corporation
