

HaulerLogic™

Hauler Transaction Software

HaulerLogic™ software was specifically developed for administration of septage receiving, as well as bulk water dispensing systems. This powerful software interfaces with and extends the capabilities of Franklin Miller Hauler Station controllers and septage receiving systems.

With HaulerLogic software, you can monitor hauler transactions and add or modify users and trucks. This software can also create, view or print single or multiple invoices, grant or disable hauler rights to use the system, display or print account balances, view transaction and account reports, and more.

**Monitors Transaction Status in Real-Time | Makes Invoicing Easy | Maintains Account Balances
Maintains Hauler Company Accounts & Vehicle Information | Auto-Synchronizes with Controller**

Operation

HaulerLogic receives data from one or more Franklin Miller Inc. (FMI) Hauler Station controls and records transactions to its highly reliable SQL database engine. Its database back-end runs on Windows based PCs or servers.

Operators can access HaulerLogic on Windows or Apple desktops, laptops, or a variety of tablets and smart phones.

This software is designed to run with a single station or scale to a network of stations in multiple locations. A unique auto-synchronization feature assures that transaction data is not lost, even in the event of a lost connection.

Advantages

- **Improves System Security**
- **Generates Revenue**
- **Handles Debit or Credit Accounts**
- **Provides Historical Reporting**
- **Monitors Single or Multiple Stations**
- **Tracks Individual Vehicle Transactions**
- **Convenient Access on Mobile Devices**
- **Supports a Multitude of Web Browsers**

HaulerLogic™ System Software

With HaulerLogic's convenient page structure and attractive design, users can easily navigate a wide range of functions.

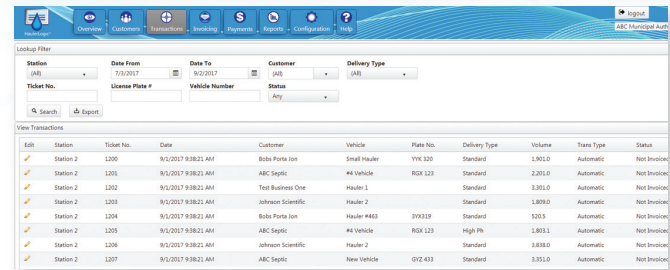

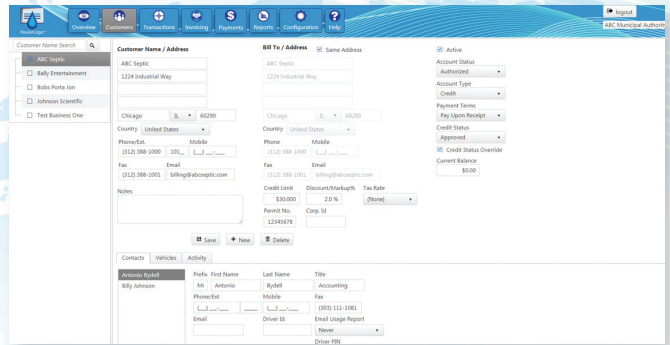

Features

CUSTOMERS: Manage customers, contacts, vehicles, permitted delivery types, debit or credit account type, credit limits, VIN, license and permit numbers, track customer status, balances and more.

TRANSACTIONS: Hauler transactions are easily searchable by station, customer, type and transaction dates. There is also an option to enter transactions manually. The ability to export transactions to a spreadsheet is provided.

INVOICING: Invoices are created from single or multiple transactions. Invoices can be generated for a user-selected time period and printed or emailed in PDF format.

PAYMENTS: Payments received can be applied to specific invoices or customer balance.

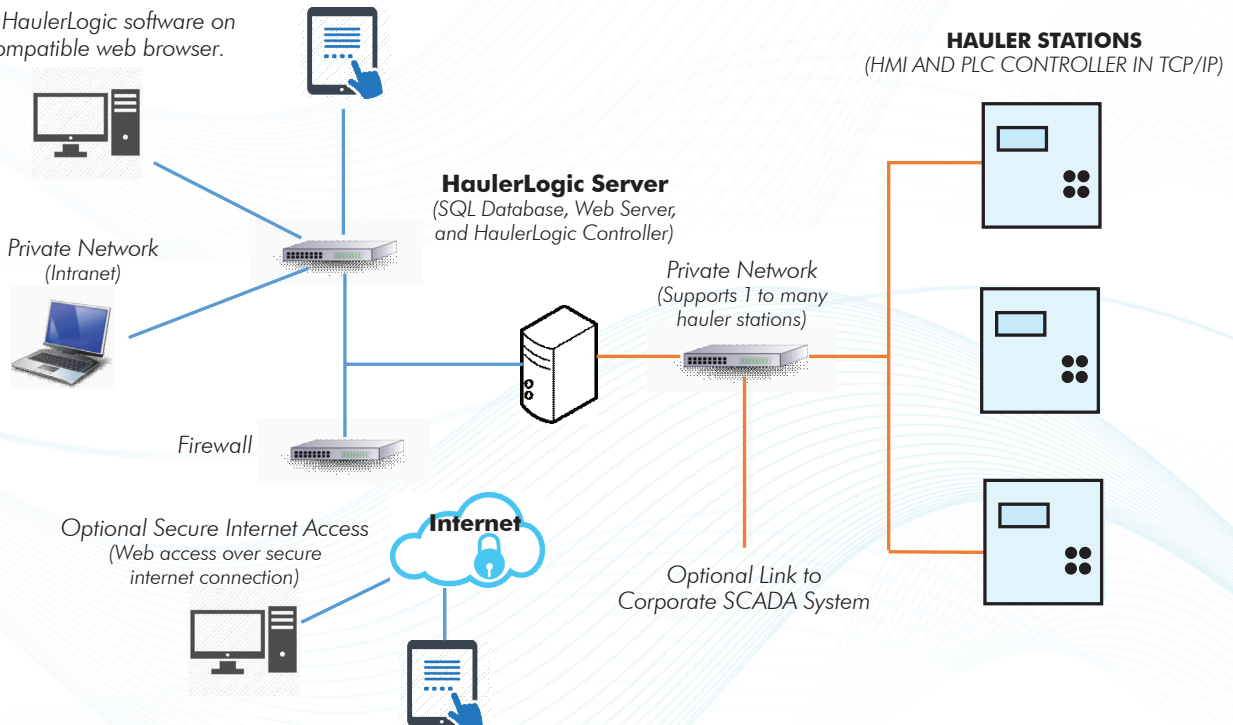

REPORTS: HaulerLogic provides a choice of reports for viewing and auditing. All report data can be exported in multiple formats.

CONFIGURATION: The system administrator has the ability to configure delivery types, set rates, stations and station parameters, define users, privileges and preferences.

Operation

Access HaulerLogic software on any compatible web browser.
