Find a Physician

Tell us your location, or just click "Let's Go" to find a physician who will listen and help identify the best treatment option for you.

City, State, or Zipcode

Any distance

Let's Go

1. Find an Acesa trained physician.

This tool will show you the physicians closest to you. Check out their profiles to see what options they offer.

2. Make that appointment.

Call their office and schedule an in-person or tele-consult.

3. Get the facts

Come to the consult ready to discuss all treatment options. What's best for you may or may not be the Acesa procedure.

Insurance Support

Insurance is complicated, but don't worry, we're here to help.

WILL YOUR INSURANCE COVER THE ACESSE PROCEDURE?

Many insurance companies cover the procedure. If you have a question you can call our Insurance Support Line.

Prior Authorization

Most insurance companies require that you or your doctor requests “prior authorization” before they cover the Acesa procedure.

In the request, the doctor describes the nature of the patient’s condition and why it is necessary to perform the Acesa procedure. The insurance company reviews the request and makes a determination regarding insurance coverage under the patient’s insurance plan. This determination is either an “approval” of the prior authorization or a “denial,” which means the insurance company explicitly is not committing to paying for the procedure being requested.

Good news: if you get a denial, there is typically an option to appeal it. And you don’t have to do it alone.

Insurance Appeals

If you are facing an appeal with your insurance denials while struggling with fibroid symptoms, the experience can be overwhelming. We have a team of insurance specialists who are here to help. The physician offices have successfully helped dozens of patients overturn denials. Although we cannot guarantee approvals or coverage, physician offices are here to support you in the process.

If you are a patient who is concerned about your insurance covering the Acesa procedure, have experienced an insurance denial or have been denied access to the Acesa procedure through your commercial or Medicaid plan, we have resources for you.

WANT MORE INSURANCE INFORMATION?

Acesa trained physicians can help you determine whether the Acesa procedure is covered by your insurance and provide guidance on your next steps.

Questions to Ask Your Doctor about Fibroids

These are my symptoms...could these be due to fibroids?

Would an MRI or ultrasound help better see if I have fibroids?

What are all possible treatment options available? What about laparoscopic radiofrequency ablation, or the Acesa procedure?

What's the best treatment option for me?

Do you offer laparoscopic radiofrequency ablation, the Acesa procedure?

Ask your physician questions specific to your planned treatment:

- What is the success rate of this procedure?
- What are the risks of this procedure?
- What is the recovery time for this procedure?
- How many times have you performed this procedure?
- How long have you been performing this procedure?
- How long do you expect it to take for me to start feeling relief from my symptoms?
- Is there a chance of fibroids growing back or new fibroids forming?

It is important you feel very comfortable with not only the treatment option you decide on, but also the physician who will be performing it. Your physician should make you feel heard, understood, and supported. If you don't feel 100% confident after a consultation with a physician, it's okay to seek a second opinion. This is your body, your choice.

The Acesa ProVu system is indicated for use in percutaneous, laparoscopic coagulation and ablation of soft tissue, including treatment of symptomatic uterine fibroids under laparoscopic ultrasound guidance. The Acesa ProVu system is contraindicated for patients who are not candidates for laparoscopic surgery and/or patients with a uterus adherent to pelvic tissue or viscera. The Acesa ProVu system's guidance system is not intended for diagnostic use. Please read all instructions for use of the Acesa ProVu system prior to its use. Safe and effective electrosurgery is dependent not only on equipment design but also on factors under control of the operator. Rare but serious risks include, but are not limited to, skin burns, mild inter-operative bleeding, post-procedural discomfort (cramping, pelvic pain), infection, vaginal bleeding, blood loss and complications related to laparoscopy and or general anesthesia. If you or someone you know has possibly experienced a side effect when using our product please contact your physician. Insufficient data exists on which to evaluate the safety and effectiveness of the Acesa ProVu system in women who plan future pregnancy, therefore the Acesa ProVu system is not recommended for women who are planning future pregnancy.
