

Introducing a hassle-free way to use Pachyderm

- Start quickly and scale with your team**
Pachyderm Hub lets individuals and teams get started instantly on their data science projects. Seamlessly add new members as your team grows to collaborate on shared data and pipelines. Explore today **with no credit card required**.
- Scalable Data Science without the DevOps**
You bring your code and data, we handle the infrastructure. Includes all the great value of Pachyderm: massive-scale data versioning, containerized data pipelines, and end-to-end data lineage tracking.
- Only pay for what you use**
As you create workspaces and run workloads, your workspace will autoscale to run the workloads you submit based on the settings in your pipelines.

Data Versioning and Lineage

Think, "git for data", but better! Pachyderm version-controls all data types and delivers end-to-end data lineage. Data Lineage means knowing, with certainty, the complete journey of your data, code, models, metadata, and all the relationships between them.

Autoscaling Data Pipelines

Pachyderm makes it simple to build end-to-end data science workflows using any language or framework you want. Turn your existing manual processes into an automated workflow where everything is tracked and versioned regardless of what data, language, or framework you use.

No Upfront Resource Planning

Workspaces automatically provision the required resources (cpu, memory, gpu, storage, etc.) to scale with your workload. Hub reduces the resource management burden, so data scientists can focus on what they do best.
