

TeQ Shield™
Aware

Safe workers, efficient workforce.

TeQ Shield™ Aware-Ready for Duty Services

Are your workers alert and fit for duty? Is your fleet driven by safe drivers? Do you have lone workers whose safety is your responsibility?

TeQ Shield™ Aware-Ready for Duty Services is a comprehensive suite of solutions that help organizations improve employee safety and create operational efficiencies. From workers in the most remote locations to drivers in urban areas, TeQ Shield Ready for Duty Services connect people with technology to improve safety and productivity.

Safety and Productivity. Delivered.

Connected workers are key to a safer and more productive workforce.

TeQ Shield™ Aware-Ready for Duty Services ensures people are safe, especially where they are exposed to social, environmental or health risks. We do this through three services:

- Fit for Duty Assessment Services
- Driver Behavior Monitoring Services
- Lone Worker Monitoring Services

Safe worksite, alert workforce

TeQ Shield™ Aware-Fit for Duty Assessment Services

The Fit for Duty Assessment is a scientifically proven, non-invasive, cognitive screening software designed to measure impairment and fatigue. Thus, identifying issues before they become problems.

It is an app that can be downloaded onto a smartphone, tablet or computer and the game-like assessment can be completed in 90 seconds. It is so quick that it can be completed before a shift, during a break or before commencement of a critical task without disrupting productivity. Yet, the results quickly and simply identify potential impairment from fatigue, medication, illness, extreme stress or substance abuse. The focus is on level of impairment rather than cause of impairment, removing judgement from management and potential opposition from the workforce.

The result? Our Fit for Duty Assessment software is a quick, objective and cost-effective way to ensure that employees are alert and ready for the task at hand.

Key benefits of the Fit for Duty Assessment software include:

- Instant notifications of workers' readiness for the job
- Privacy protection with a non-invasive process that does not seek out impairment cause
- Neutral, image-based tool that avoids bias and can be used by anyone
- Information security that can only be accessed with password-protected log-in
- Ability to manage and track employee profiles and review detailed statistics to identify trends
- Inform safety programs with insight into workers' cognitive health

Lead the drive to safer driving

TeQ Shield™ Aware–Driver Behavior Monitoring Services

TeQ Shield Aware- Driver Behavior Monitoring is an app-based driver behavior software that evaluates, monitors, tracks and provides improvement feedback on driver behavior.

With extensive analytics and map-based visualization, our Driver Behavior Monitoring app gives managers valuable insights into risks and trends, helps them identify journey hot-spots and better routes, and gain operational insight about all their vehicles. This results in improved fuel economy, vehicle uptime, safety performance and significant cost saving in addition to the core benefit of promoting safer driving behavior.

With a simple app for drivers (iOS, Android) and web-based portal for managers, the program can be rolled out across your fleet in no time at all. The result? Safe driving, safer workers.

Key benefits of the Driver Behavior Monitoring app include:

- Motivation for improved driving through comparative scores, gamification and coaching
- Predictive insights and business intelligence into trends and issues
- Cost reduction through improved journey planning and liability reduction
- Monitoring of phone use, to help stop distracted driving
- Provides eight points of analysis including speeding, braking, cornering, and overall focus
- Includes on-duty/off-duty switching and scheduling for privacy protection
- Predictive insights and business intelligence into trends and issues
- Group announcement features to broadcast alerts and other messages to your team
- Eco score calculation to help save fuel costs
- No hardware installation, capital expenses or vehicle downtime
- Lower insurance costs through improved safety outcomes

Aware You've got lone workers. We've got them covered.

TeQ Shield™-Lone Worker Monitoring Services

Lone Worker Monitoring Services is an effective solution that enables lone workers to keep in touch with the right people at the right time to ensure that they stay safe while working alone.

The Lone Worker Monitoring software is a comprehensive service platform that includes an easy-to-use app, a web-based Control Center, 24/7 live response center monitoring, and optional wearables and devices – to protect anyone in your company, wherever they are. Monitors at an emergency response center assess status 24/7, investigate missed check-ins, communicate with workers and find the best help in the event of an emergency. Data is captured in real time, so a response team always has the most up-to-date information. In short, we provide real-time insights with real people support.

Key benefits of the Lone Worker Monitoring Service include:

- Robust data into activity, condition, location, and time, including alerts for non-medical assistance, hazard timers and record-keeping for audits and incidents
- 24/7/365 protection, with guaranteed outcomes whether employees are on or off the clock, for no extra cost
- Automated and manual check-in options, including in-motion check-ins for driving
- Worker trusted, with a secure platform and privacy settings
- Two-way communication with emergency response staff
- Configurable escalation procedures
- Ability for response center to standardize software to improve response times
- “Neighbor-helping-neighbor” feature identifies others in the area who might help, whether or not they work at the same company
- Compatible with a range of devices (iOS, Android, satellite, wearables), adaptable to your company protocols and your choice of response center
- Open platform with no proprietary equipment saves costs and configures to future needs
- Designed to meet communication, alarm and other procedures recommended by legislation
