

TeQ Shield™

Enhanced safety and productivity at the rig site

As oil and gas exploration and production become increasingly challenging, digital and networking solutions are stepping up to provide enhanced safety and productivity for onsite workers. Using TeQ Shield™ solutions, we help you gain project control and visibility in all stages of exploration and production from drilling to final well completion. United Safety's integrated suite of safety services combines gas detection, video surveillance in confined spaces, two-way communication, access control, permitting, quality control and assurance and monitoring of core body vitals to improve safety and productivity while reducing costs.
