WHAT WE DO

Providing State-of-the-Art Solutions

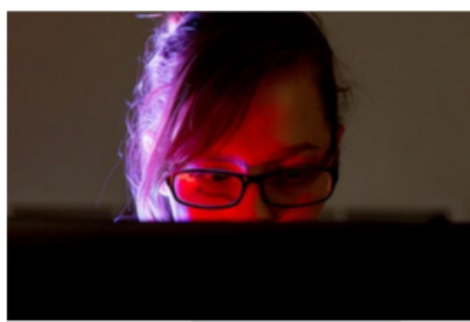

GRIMM is uniquely organized to solve complex cybersecurity problems. We help clients understand how to protect and defend systems, networks, and devices at every stage of development.

We are hiring! See our Careers Page for open positions.

Contact

Red Team / Penetration Testing

GRIMM's Red Team offering provides adversarial campaign-styled approaches useful in testing and assessing organizational controls

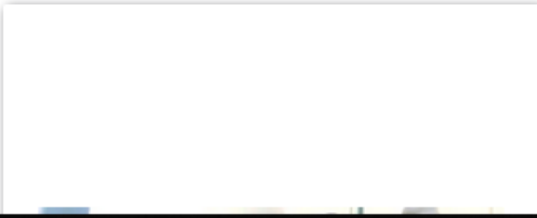

Security Management Solutions

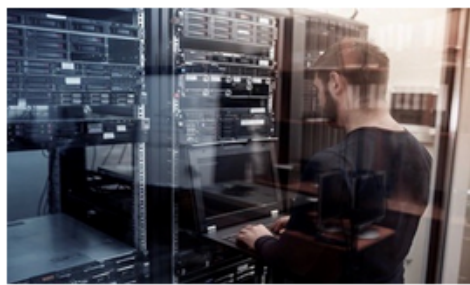

GRIMM helps executives and organizations understand cybersecurity risk and the potential impact on business

CyPhy™

GRIMM's CyPhy™ (Cyber-Physical) team perform vulnerability assessments on, and provide technical solutions for embedded systems or "systems within in systems" across many sectors including the Critical Infrastructure sector; this includes Manufacturing, Energy, Financial Services, Healthcare, and Water

Security Testing

GRIMM offers the development of Cyber/Test Range capabilities, installation, and operations. This includes the implementation of secure software development best practices and automated test frameworks

Threat Hunting

GRIMM's threat hunting quickly detects threats to help increase an organizations' collective security posture

Connected Mobility

GRIMM's connected mobility teams perform vulnerability assessments and provide technical recommendations for systems within the transportation sector; this includes aerospace, automotive, drones / flying robotics, shipping, heavy trucking, and general transit

Contact

Tailored Software

GRIMM's tailored software capabilities provides custom solutions that integrate with existing platforms and improve situational awareness

Application Security

GRIMM's application security capabilities identify design and implementation vulnerabilities that may be exploited to cause damage to the enterprise (e.g., data loss)

Security Training and Education

GRIMM offers over 10 ready-to-go courseware across the disciplines of Vulnerability Research, OS internals, and Exploitation. GRIMM's technical training practice leverages real-world knowledge based on operational expertise
