

background. Global manufacturing and market access. Direct-to-physician operational excellence.

Our proven management team has extensive expertise in the vascular space with robust catheter and generator development experience. We have strong relationships with our low-cost manufacturing partners along with access to over 3,000 cardiovascular centers in all major geographies.

One of our portfolio companies, [Crossfire Medical](#), is focused on the \$1B+ chronic venous insufficiency market and is actively developing low-cost endovenous radiofrequency ablation catheters and several innovative non-tumescent, non-thermal products.

Our seasoned team is also developing multiple devices for the \$3B+ peripheral arterial disease market, including a novel intravascular lithotripsy system with [FastWave Medical](#) as well as several cost-effective therapeutic catheters designed for office-based labs.
