Red Team Toolkit

There are many challenges to conducting successful cyber operations, and even more when operational security and stealth are necessary for the success of the operation. Red Team Toolkit was built for NetSPI to provide support and reliability in an increasingly challenging offensive landscape.

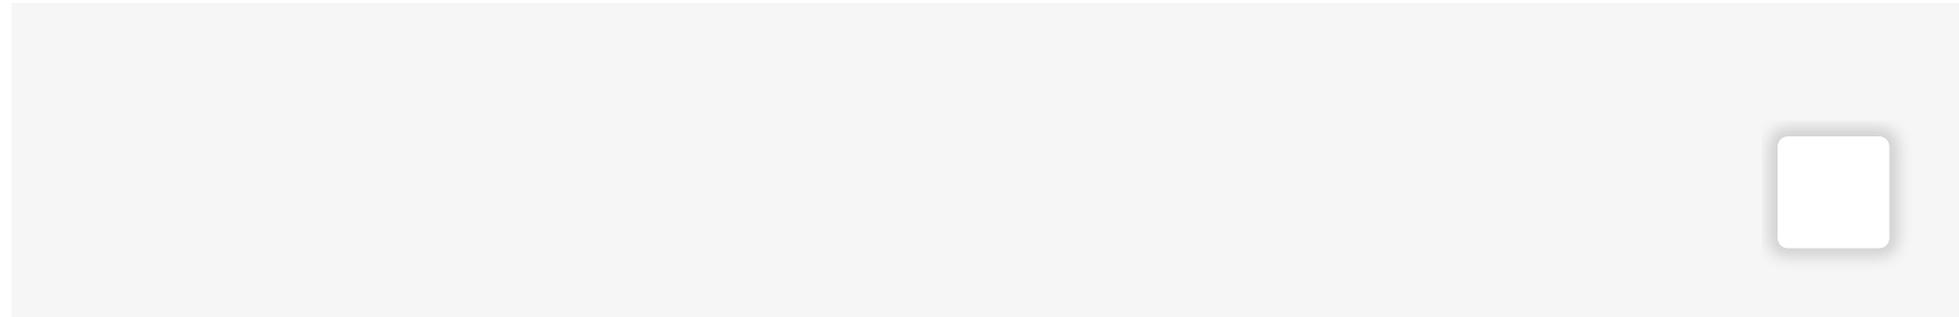

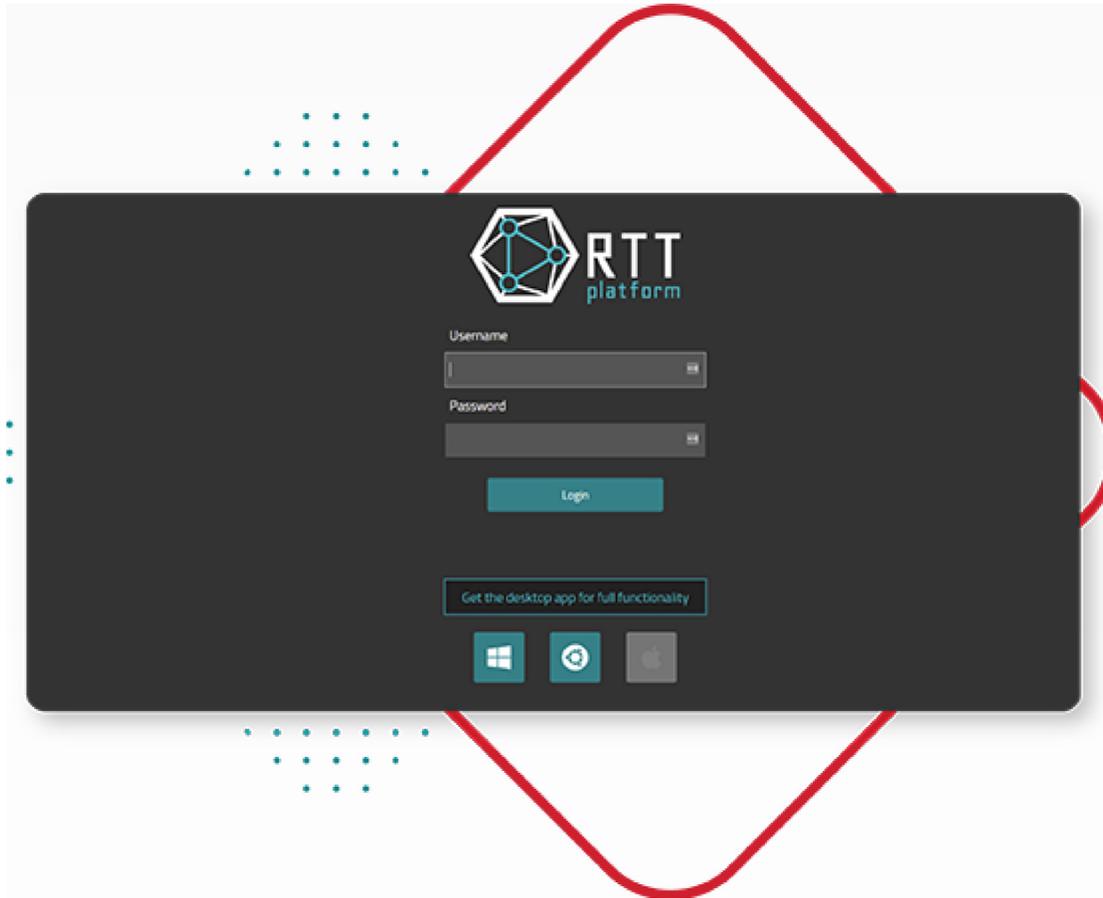

Engage with NetSPI for your Red Team Operations

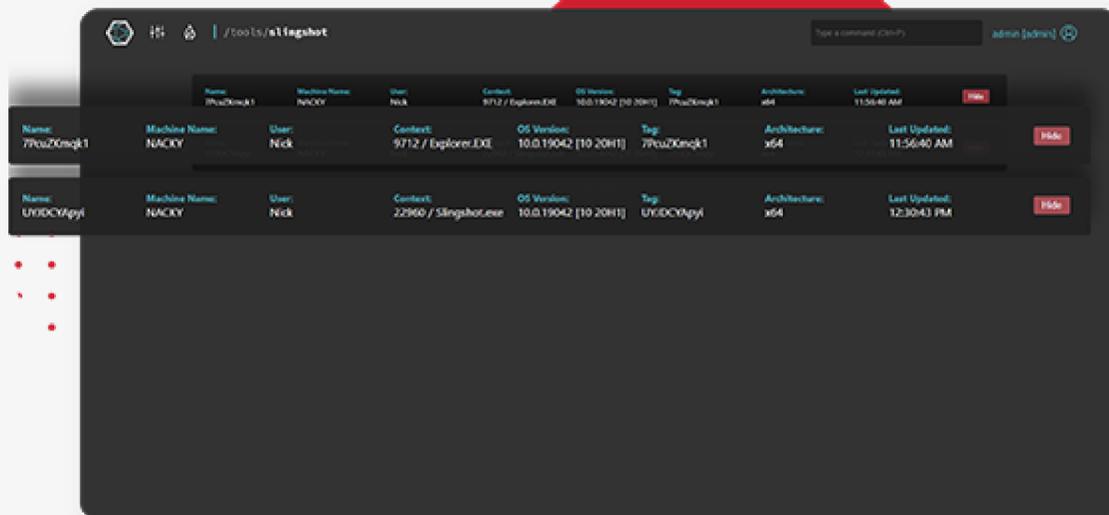

Defend Against Sophisticated Attacks

Red Team Toolkit is an offensive security platform and tooling suite used by NetSPI to optimize your red team operations and penetration tests. The toolkit enables NetSPI to perform advanced network operations, collaborate on target exploitation, and better simulate sophisticated adversaries.

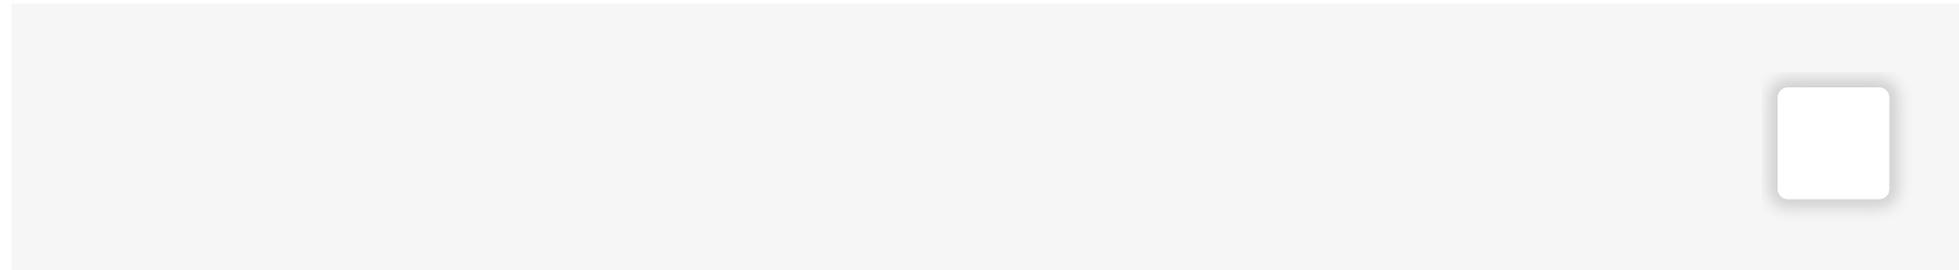

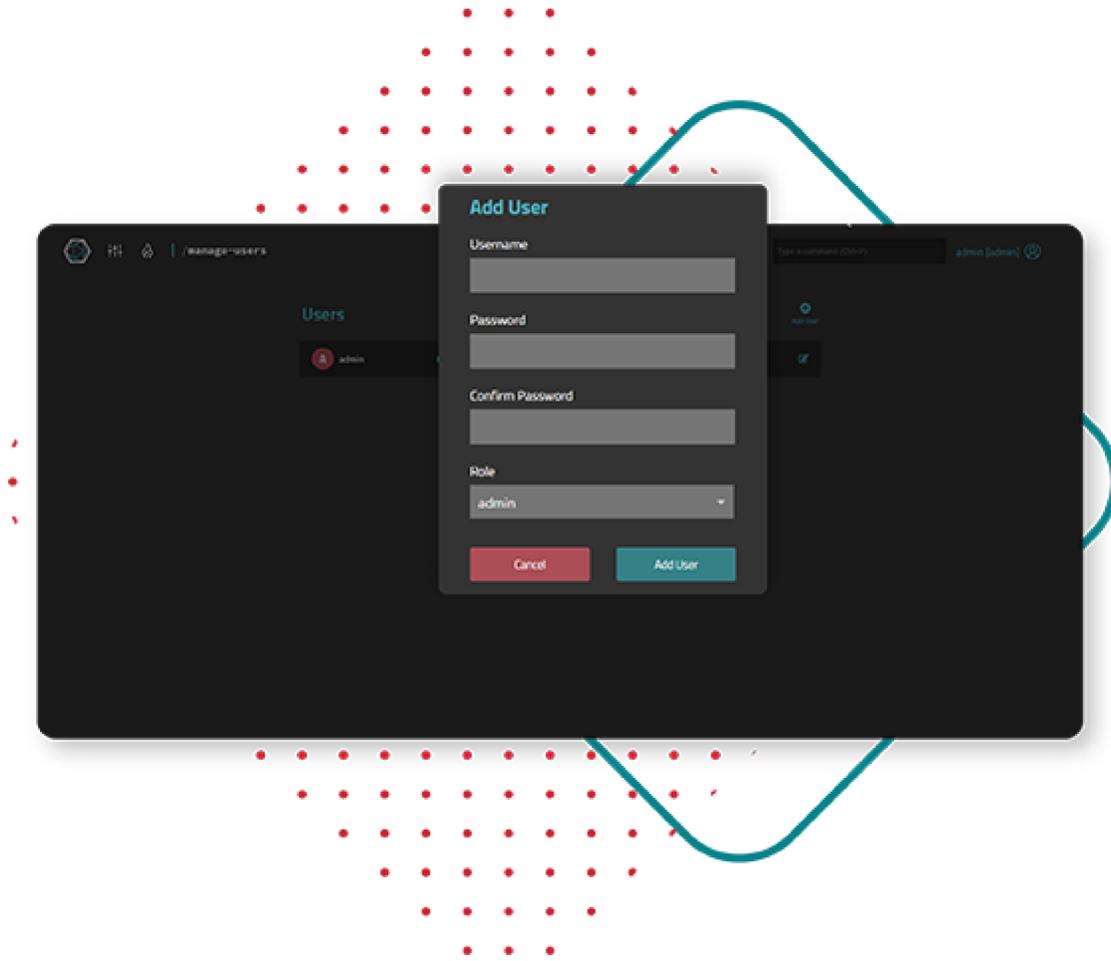

More Than Just a Tool

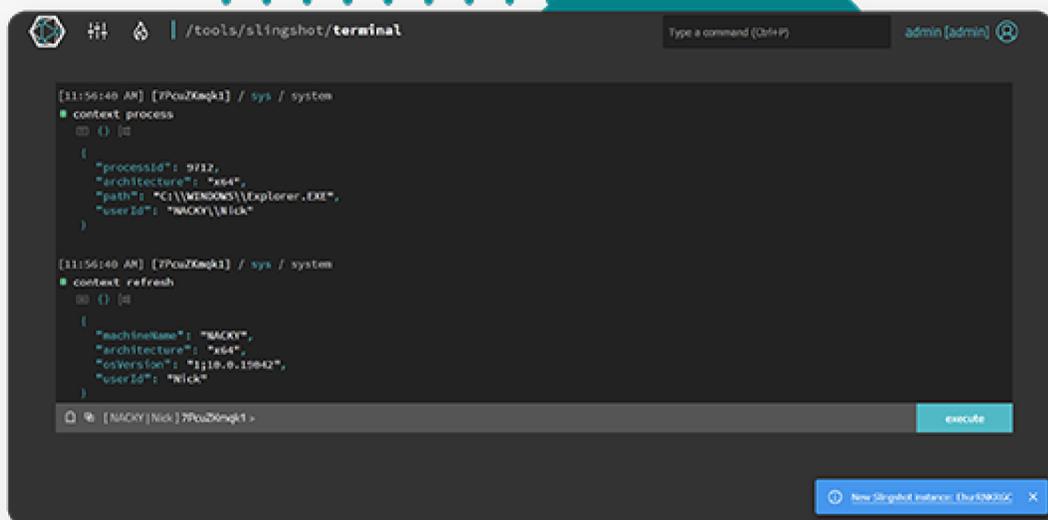

Red Team Toolkit drives stealthy cyber operations through all phases of an attack, including initial access, privilege escalation, persistence, and impact. It includes several tools, including Slingshot and Throwback. Each tool has a specific purpose to facilitate stealthy operations and adversary emulation.

Slingshot

Slingshot is a powerful post-exploitation agent for NetSPI's red team operations. Built with OpSec first, Slingshot empowers NetSPI to emulate sophisticated adversaries through stealthy injection techniques, memory obfuscation, malleable network profiles, and loads of defensive evasion capabilities. It empowers operations with a limited detection surface, powerful modularity, and ephemeral concepts.

A screenshot of a terminal window titled "/tools/slingshot/terminal" with a search bar containing "Type a command (Ctrl+F)" and a user profile "admin [admin]". The terminal shows two commands and their outputs. The first command is "context process" which returns a JSON object: {"processId": 9112, "architecture": "x64", "path": "C:\\WINDOWS\\Explorer.EXE", "userId": "NACRY\\NICK"}. The second command is "context refresh" which returns a JSON object: {"machineName": "NACRY", "architecture": "x64", "osVersion": "1118.0.15042", "userId": "NICK"}. At the bottom of the terminal, there is a prompt "[NACRY|NICK] 7Pou26ngk1" and an "execute" button. A "New Slingshot instance: 1bu5K805C" button is also visible at the bottom right of the terminal window.

```
[11:56:40 AM] [7Pou26ngk1] / sys / system
context process
{} | {} | {}
{
  "processId": 9112,
  "architecture": "x64",
  "path": "C:\\WINDOWS\\Explorer.EXE",
  "userId": "NACRY\\NICK"
}

[11:56:40 AM] [7Pou26ngk1] / sys / system
context refresh
{} | {} | {}
{
  "machineName": "NACRY",
  "architecture": "x64",
  "osVersion": "1118.0.15042",
  "userId": "NICK"
}
```

Improve Your Defense in Depth

NetSPI uses sophisticated attack techniques through all phases of an attack chain to identify gaps in your defense in depth. We also work with your defensive teams to improve detection

capabilities through our collaborative assessments.

OpSec at Every Layer

The Red Team Toolkit platform features over 15 defensive countermeasures. Evasion techniques include leveraging syscalls for stealthy code injection, in-memory obfuscation of modules, as well as AMSI, ETW, and PowerShell logging bypasses. OpSec has been built into every layer

of every tool within Red Team Toolkit, providing powerful red team results.

```
[12:38:43 PM] [UY3OCYpy] / sys / system
context process
  {}
  {
    "processId": 22960,
    "architecture": "x64",
    "path": "C:\\Users\\Nicky\\Documents\\Projects\\SI\\ingshot\\SI\\feint\\i64\\0nbug\\SI\\ingshot.exe",
    "userId": "NICKY\\Nicky"
  }

[12:38:43 PM] [UY3OCYpy] / sys / system
context refresh
  {}
  {
    "machineName": "NICKY",
    "architecture": "x64",
    "toolVersion": "1.18.0.19842",
    "userId": "Nicky"
  }
```

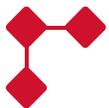

Red Team Toolkit Resources

Need a Red Team Engagement?

A NetSPI red team engagement will put your organization's security controls, policies, and employee training to the test. NetSPI will work with you to understand your requirements and goals to develop an approach that answers the questions that are important to your business.

[Learn More](#)

Dark Side Ops (DSO) Training

Our DSO 1: Malware Dev course focuses on the goals, challenges, architecture, and operations of advanced persistent threat (APT) tooling. And, DSO 2: Adversary Simulation highlights the combination of sophisticated red team trade craft and offensive development to simulate adversary activities.

Red Team Tip Sheet

Red team operations are a critical offensive security tactic that put your organization's cybersecurity processes, tools, and policies to the test. To be successful, organizations must ensure their red teams are equipped with the right people, processes, and technologies. Download this tip sheet to learn the five things every red team needs to optimize operations.
