TOP FAVORABLE REVIEW

Works well

Pros: Easy to install, beautiful colors
Cons: Uses it's own piece of software to manage the RGB which needs to be running in addition to the TTRGB Plus software to sync

Overall Review: Performs great, looks great. Lets be honest. I've not ran much other 3600MHZ ram, but the quality feels nice and the colors are beautiful.

Question about the product info? [FEEDBACK](#)

System instability after 6 months on XAMPP OC

Pros: - Cube aesthetic may look nice in your build
 - Diffused RGB looks pretty
Cons: - Running these under XAMPP OC diminished their performance in just 6 months
 - Caused system instability leading to strange freezes that were hard to debug
Overall Review: If you're not planning on OCing these and want them more for the looks, then go ahead, they work perfectly fine in their stock configuration.

XAMPP SETTINGS WILL DIMINISH PERFORMANCE AND STABILTY FAST. NOT WORTH IT FOR OVER CLOCKING.
