

CRYPTOCURRENCY

ZEN is the native cryptocurrency of Horizen. Its optional privacy feature allows you to control your digital footprint.

ZEN offers two different types of addresses:

- **T-Addresses** - Regular addresses for making transactions similar to bitcoin. These transactions are public and transparent on the blockchain.
- **Z-Addresses** - Also known as shielded addresses, transactions between z-addresses are completely private and anonymous. They leverage zero-knowledge cryptography to obscure sender and recipient addresses, as well as the amount sent.

Balances in shielded addresses are private, however, any regular addresses on the receiving end will deshield the token and reveal the value received on the blockchain.

OVERVIEW

ZEN current price:

\$73.96

USD

Total supply:

21,000,000

Volume (24h):

Community Updates

The first and only fully decentralized and privacy-preserving audit blockchain is on Horizen!

MERCHANT DIRECTORY

We know that it is critically important for people to be able to use ZEN as a real currency to make real purchases.

We are connecting merchants to the ZEN network and use Horizen to ensure their transactions are secure and private.
