

Erectile Dysfunction

Erectile dysfunction is far more prevalent than men think and it affects many aspects of your life. As men age, the blood vessels in the penis become clogged as well as nerves to the penis begin to degenerate. This creates difficulty in obtaining and maintaining an erection. Chronic diseases, such as diabetes, high cholesterol, high blood pressure, and obesity are contributing factors to erectile issues. WaveTech Therapy's acoustic waves treat erectile issues by activating a pathway for stem cells, which rejuvenate vessels, tissue, and nerves.

Peripheral Neuropathy

Do you suffer from numbness and tingling in your arms or legs? You could potentially have a disease called peripheral neuropathy. Neuropathy is a disease where the nerves are unable to transfer signals to and from the brain causing pain, "pins and needles" sensation, temperature changes, and balance problems. Diabetes, low back problems, and chemotherapy are a few reasons why nerves alter and have a lack of adequate blood supply. WaveTech Therapy uses acoustic sound waves to promote regeneration of the blood supply to the affected area. Stem cells are directed towards the areas of treatment, which allow for continuous effectiveness for up to 12 weeks after your last treatment.

Chronic Pain

Chronic pain affects every aspect of your life, physically and mentally. While treatments like medication and surgery provide relief, the dangers and side effects can be detrimental. WaveTech Therapy directly treats inflamed and painful areas with its acoustic sound waves. The positive outcomes of treating chronic pain are reduction of inflammation and pain, increased blood flow, and potential regeneration of damaged tissue. Acoustic sound wave therapy provides signals to the brain of where the trauma is located. The stem cells are then transmitted to the affected area initiating the healing process for up to 12 weeks. Relief from the affected area can be felt as early as the first treatment.
