## OVERVIEW   SPECS   APPLICATIONS   VIDEO

The MUSE M15 disrupts the vinyl cutter world with ground-breaking features and an appealing user experience that surpasses name brand cutters costing twice as much. It incorporates thoughtful touches like programmable LED platen lighting, camera-based automatic registration mark sensing, and a tool carriage that supports cutting and engraving. The unique tool carriage accommodates two tools for seamless transitions from pen plotting to vinyl cutting or scribe engraving. It's a great complement to digital printers and a versatile, thoroughly modern solution for all kinds of vinyl signs and graphics. Disruption never looked so good!
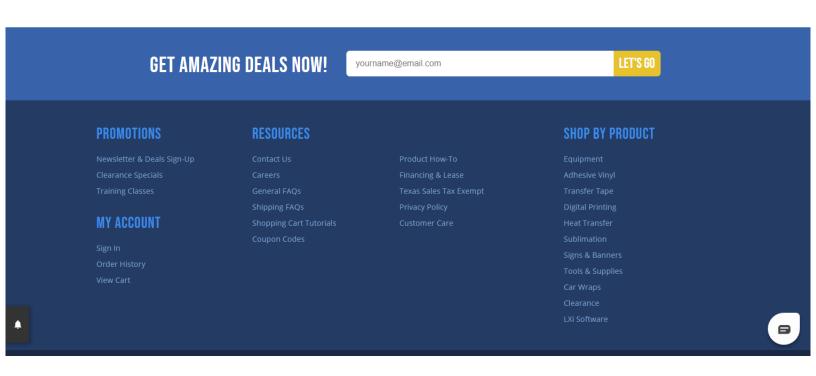

MUSE M15 Features:

- Large High Tech Touch Screen: The MUSE M15 features an appealing LCD user touch screen interface that combines smart menus with ease of use. The menu includes powerful functions like automatic contour cutting, camera settings, wi-fi connectivity, and programmable presets.
- Tool carriage supports standard vinyl cutting blade plus pen tool and scribe engraving tool for use on acrylic sheeting.
- Camera-based Contour-Cutting: The M15 incorporates an advanced camera that scans printed registration marks and integrates them into the LCD to show the camera's progress as marks are scanned. The LCD menu and camera interface supports the precise calibration of the camera and the scanning mechanism.
- The programmable LED platen lighting illuminates the work area and supports more consistent performance scanning printed registration marks in various lighting conditions.
- Wi-fi, U-disc Options for Remote Cutting: The M15 is equipped for remote cutting with a USB port that accommodates processing plotter files from a thumb drive, and a wi-fi option that supports sending jobs wirelessly over your home or office network. You're no longer tethered to your PC.
