

TECHNOLOGY

Baton CORE

The next evolution in post-trade is here. Baton CORE is transforming the inefficient and costly post-trade processes we've come to accept as the status quo. Revolutionising the entire front to back process, Baton is introducing fully interoperable digital infrastructures from trade matching through to settlement.

Our suite of solutions are redefining what post-trade processing should look like: fully connected, friction-free, flexible and transparent.

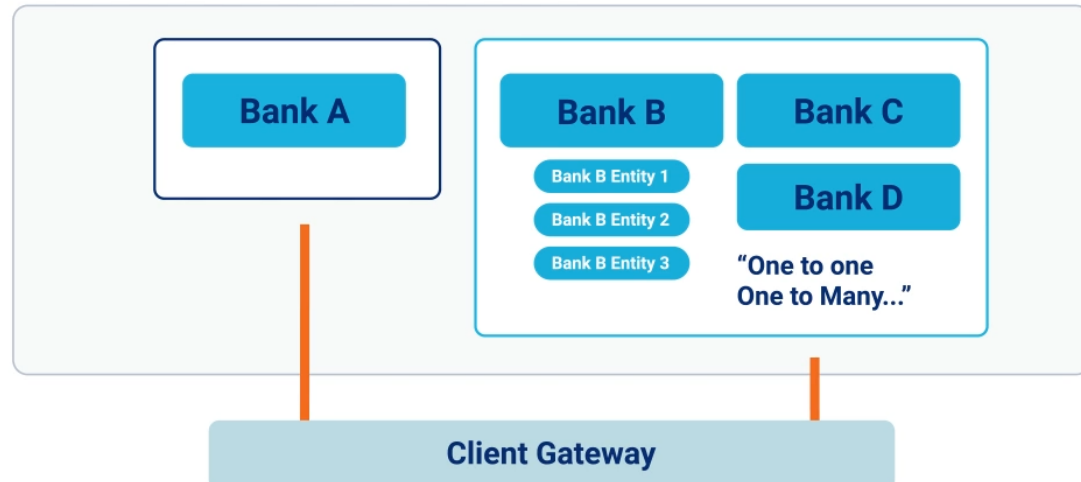

Welcome to Baton. Post-Trade. Redefined.

BOOK A DEMO

THE BATON SOLUTION

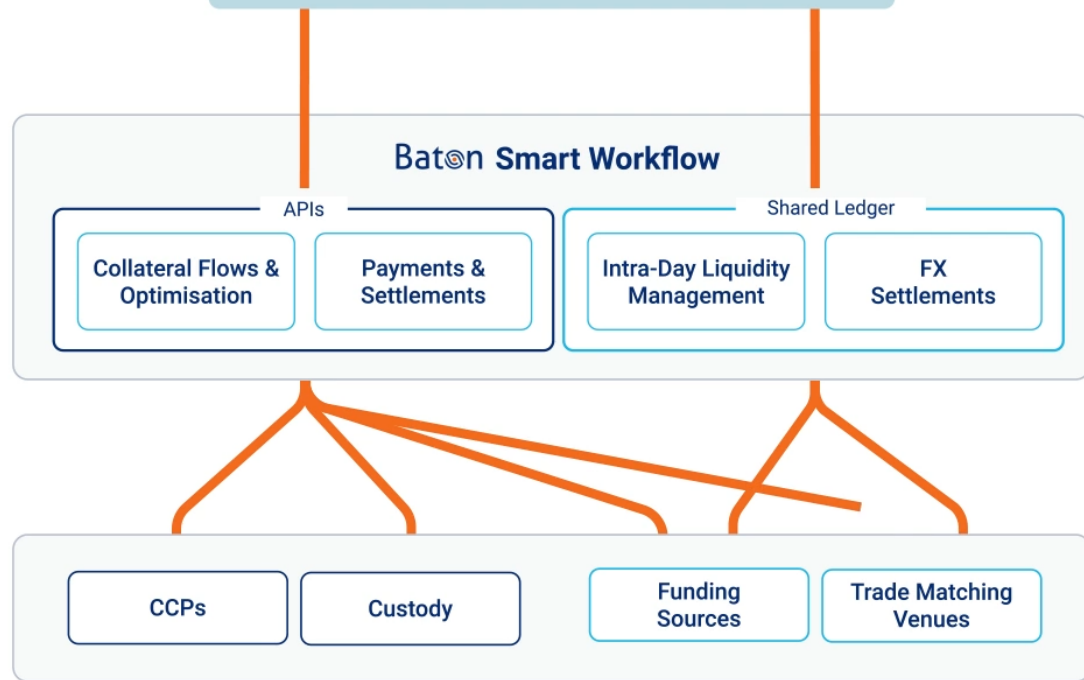

Next Generation Technology

Baton CORE solutions are based on distributed ledger technology (DLT) and designed to elevate a firm's control over their assets, allowing for improved use of capital, reduced risk exposure and effective liquidity management with increased operational resiliency and productivity.

Fully Connected

Baton's interoperable rules-based distributed ledger is system-agnostic and unobtrusive, designed to interoperate seamlessly with the core ledgers, payment gateways and messaging systems already in place, using secure access protocols, adapters and APIs.

Friction-Free

Overcome the operational intervention, risks and points of failure presented by central server architectures using zero-friction, fully configurable, smart and automated workflows.

Flexible, Transparent and Secure

Baton's interoperable rules-based distributed ledger platform provides settlement participants with a wealth of choice and full transparency of all activities. It's SaaS based and it can be quickly and securely deployed through the cloud using a single tenant architecture.
