

USE CASE:

Core-Liquidity

Transfer asset ownership, in real-time, on-demand, 24/7.

With Core-Liquidity we're solving the old money problems associated with controlling and tracking the movement of funds with the best in new, shared ledger technology. Core-Liquidity, allows asset ownership to be transferred in real time, on demand, 24/7, in a legally enforceable way. It's programmable money on existing payment rails.

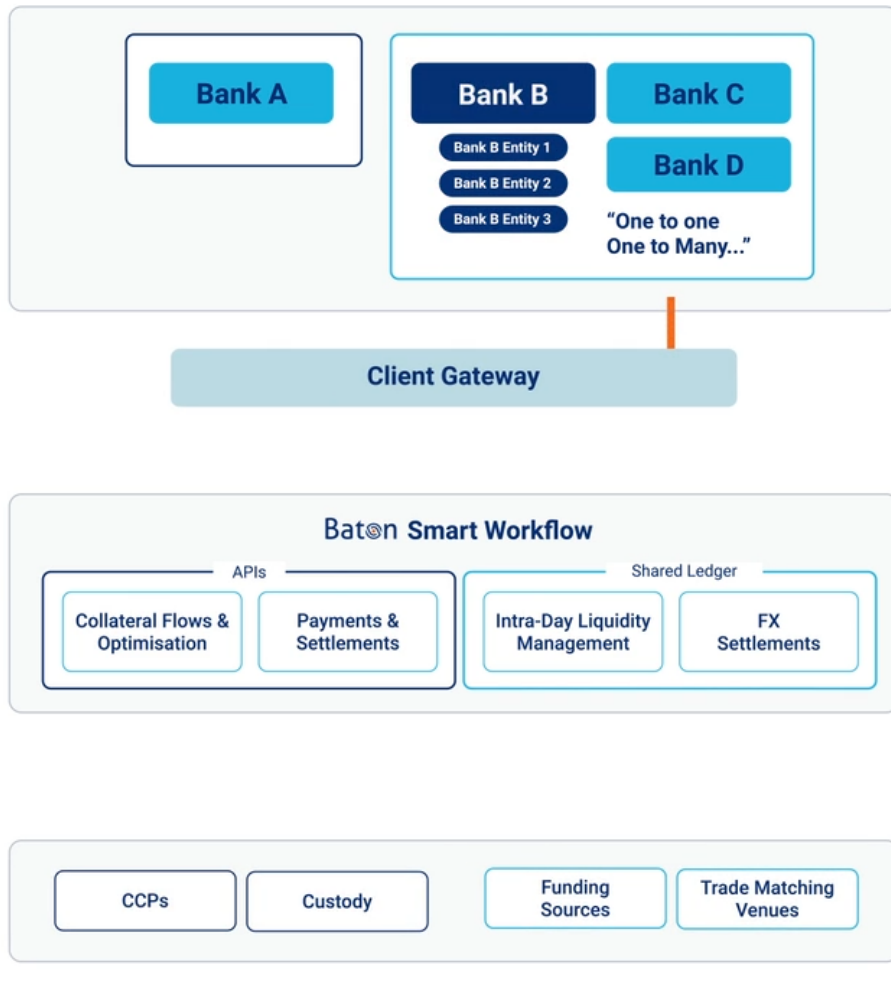

Welcome to Baton. Post-Trade. Redefined.

Minimise liquidity usage and funding costs

It's challenging to track and balance liquidity between entities and some firms find themselves crossing large spreads on interest payments and charges when they're actually sufficiently funded to avoid these costs.

Core-Liquidity facilitates real-time, friction-free cash movements between accounts. Providing real-time reporting and smart workflows that allow you to optimise the netting and sequencing of cash movements, so they can be matched to your firm's binding constraints.

THE PLATFORM

Changes of ownership controlled by your configurations and instructions

The Baton ledger reflects the allocation of asset ownership across a range of sub-accounts or wallets. Changes of ownership are driven through smart workflows, according to the configuration and instructions that you determine.

They're completely flexible- and enforced by a robust rulebook, ensuring irreversibility and enabling you to achieve settlement finality.
