The Anova Precision™ Perforated Pan

For even airflow and
quicker cooking.

Airflow dynamic

Use the Anova Precision™ Perforated Pan to bake everything from a perfectly steamed tray of colorful veggies or dumplings, to beautiful breads and air fried cuts of meat.

If the goal of your baking is to achieve extremely even heat distribution and airflow, you've come to the right place. The vented surface of this pan results in meals that are both faster to cook and even more delicious to eat.

No warping, no problem

This perforated pan has been specially designed with corrugated stainless steel to be structurally resistant to any kind of warping while baking. Trust us, it can take the heat.

A perfect perforated fit

This perforated pan was made specifically for the Anova Precision™ Oven and fits directly on top of the wire rack in your oven. Simply place a second pan a few slots below to avoid any unwanted residue on the oven floor.
